Table of Contents

SAFETY INSTRUCTIONS

This chapter contains important safety instructions that you must follow during operation and storage. Read the following before any operation to insure your safety and to keep the instrument in the best possible condition.

Safety Symbols

These safety symbols may appear in this manual or on the GDS-3000.

⚠️ WARNING	Warning: Identifies conditions or practices that could result in injury or loss of life.
⚠️ CAUTION	Caution: Identifies conditions or practices that could result in damage to the GDS-3000 or to other properties.
⚡	DANGER High Voltage
⚠️	Attention Refer to the Manual
⏚	Protective Conductor Terminal
⏛	Earth (ground) Terminal

Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.

Safety Guidelines

General Guideline

⚠ CAUTION

- Make sure the BNC input voltage does not exceed 300V peak.

- Never connect a hazardous live voltage to the ground side of the BNC connectors. It might lead to fire and electric shock.

- Do not place any heavy object on the GDS-3000.

- Avoid severe impact or rough handling that leads to damaging the GDS-3000.

- Do not discharge static electricity to the GDS-3000.

- Use only mating connectors, not bare wires, for the terminals.

- Do not block the cooling fan opening.

- Do not perform measurement at a power source or building installation site (Note below).

- Do not disassemble the GDS-3000 unless you are qualified.

(Measurement categories) EN 61010-1:2001 specifies the measurement categories and their requirements as follows. The GDS-3000 falls under category II.

- Measurement category IV is for measurement performed at the source of low-voltage installation.

- Measurement category III is for measurement performed in the building installation.

- Measurement category II is for measurement performed on the circuits directly connected to the low voltage installation.

- Measurement category I is for measurements performed on circuits not directly connected to Mains.

| Power Supply ⚠ WARNING | • AC Input voltage: 100 ~ 240V AC, 48 ~ 63Hz, auto selection. Power consumption: 96VA. |
| | • Connect the protective grounding conductor of the AC power cord to an earth ground, to avoid electrical shock. |

Cleaning the GDS-3000	• Disconnect the power cord before cleaning.
	• Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid.
	• Do not use chemical containing harsh material such as benzene, toluene, xylene, and acetone.

Operation Environment	• Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below)
	• Relative Humidity: < 80%
	• Altitude: < 2000m
	• Temperature: 0°C to 50°C

(Pollution Degree) EN 61010-1:2001 specifies the pollution degrees and their requirements as follows. The GDS-3000 falls under degree 2.

Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity".

• Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

• Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected.

• Pollution degree 3: Conductive pollution occurs, or dry, non-conductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.

Storage environment	• Location: Indoor
	• Temperature: -10°C to 60°C
	40°C /93% RH 41°C ~60°C /65% RH

Disposal

Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

Power cord for the United Kingdom

When using the oscilloscope in the United Kingdom, make sure the power cord meets the following safety instructions.

NOTE: This lead/appliance must only be wired by competent persons

⚠ WARNING: THIS APPLIANCE MUST BE EARTHED

IMPORTANT: The wires in this lead are coloured in accordance with the following code:

Green/ Yellow: Earth
Blue: Neutral
Brown: Live (Phase)

As the colours of the wires in main leads may not correspond with the coloured marking identified in your plug/appliance, proceed as follows:

The wire which is coloured Green & Yellow must be connected to the Earth terminal marked with either the letter E, the earth symbol ⏚ or coloured Green/Green & Yellow.

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N or coloured Blue or Black.

The wire which is coloured Brown must be connected to the terminal marked with the letter L or P or coloured Brown or Red.

If in doubt, consult the instructions provided with the equipment or contact the supplier.

This cable/appliance should be protected by a suitably rated and approved HBC mains fuse: refer to the rating information on the equipment and/or user instructions for details. As a guide, a cable of $0.75mm^2$ should be protected by a 3A or 5A fuse. Larger conductors would normally require 13A types, depending on the connection method used.

Any exposed wiring from a cable, plug or connection that is engaged in a live socket is extremely hazardous. If a cable or plug is deemed hazardous, turn off the mains power and remove the cable, any fuses and fuse assemblies. All hazardous wiring must be immediately destroyed and replaced in accordance to the above standard.

GETTING STARTED

This chapter describes the GDS-3000 in a nutshell, including its main features and front / rear panel introduction. After going through the overview, follow the Set Up section to properly set up the oscilloscope for first-time use. The Set Up section also includes a starter on how to use this manual effectively.

GDS-3000 Series Overview

Series lineup

The GDS-3000 series consists of 8 models, divided into 2-channel and 4-channel versions.

Model name	Frequency bandwidth	Input channels	Real-time Sampling Rate
GDS-3152	150MHz	2	2.5GSa/s
GDS-3252	250MHz	2	2.5GSa/s
GDS-3352	350MHz	2	5GSa/s
GDS-3502	500MHz	2	4GSa/s
GDS-3154	150MHz	4	5GSa/s
GDS-3254	250MHz	4	5GSa/s
GDS-3354	350MHz	4	5GSa/s
GDS-3504	500MHz	4	4GSa/s

The 2 channel and 4 channel models differ in the position of the horizontal controls, the math, reference and bus keys as well as the position of the EXT trigger.
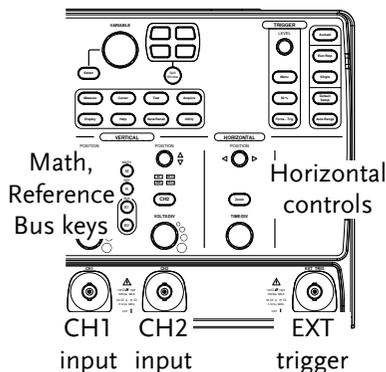

2-Channel models   4-Channel models

Main Features

Performance	• High sampling rate: up to 5GSa/s real-time (4GSa/s GDS-350X), 100GSa/s equivalent-time
	• Deep memory: 25k points record length
	• Minimum 2ns peak detection
Features	• 2 and 4 channel models
	• Bandwidth up to 500 MHz
	• 5GSa/s (200ps resolution) real-time sampling rate (4GSa/s, 250ps resolution for GDS-350X)
	• 100GSa/s equivalent sample rate
	• VPO waveform processing
	• Large 8'' 800 x 600 high-resolution TFT LCD
	• Unique split window function
	• Flexible application modules

- Three standard input impedances (50Ω/75Ω/1MΩ)

- Optional power measurement functions are available for fast analysis of power quality tests

- Optional analysis software for I²C, SPI and UART serial signal triggering and decoding

- 2 and 4 channel models available up to 500 MHz

- Large 8″ color TFT LCD, supporting a large 8 x 10 graticule

- On-screen Help

- 64 MB internal flash memory.

- FreeWave remote control software (free download)

Interface
- USB host port: front and rear panel, for storage devices

- USB slave port(Optional GPIB to USB), RS-232C port: for remote control

- Calibration output

- Go-No Go output

- Trigger output

- Ethernet port

Accessories

Standard Accessories	Part number	Description
	82DS-33040MA1	User manual
	N/A region dependent	Power cord
Options	Option Number	Description
	DS3-PWR	Power analysis software
	DS3-SBD	Series Bus analysis software

	GPIB to USB adapter	GPIB Interface

	Part number	Description
Optional Accessories		
	GTC-001	Instrument cart, 470(W)x430(D)mm (U.S. type input socket)
	GTC-002	Instrument cart, 330(W)x430(D)mm (U.S. type input socket)
	GTL-110	test lead, BNC to BNC heads
	GTL-232	RS-232C cable, 9-pin Female to 9-pin female, Null modem for computer
	GTL-246	USB cable, USB2.0A-B type cable 4P
	GDB-03	Demoboard for the GDS-3000 Series DSO
	GDP-025	25MHz high voltage differential probe
	GDP-050	50MHz high voltage differential probe
	GDP-100	100MHz high voltage differential probe
	GCP-005	5A/ 40Hz~1kHz current probe
	GCP-020	200A/40Hz~10kHz current probe
	GCP-100	100A/DC~100kHz current probe
	GCP-530	50MHz/ 30A current probe
	GCP-1030	100MHz/ 30A current probe
	GCP-206P	Power supply for current probe (2 input channels)
	GCP-425P	Power supply for current probe (4 input channels)
	GTP-151R	Passive probe; 150 MHz,10X with readout
	GTP-251R	Passive probe; 250 MHz, 10X with readout

|		
	GTP-351R	Passive probe; 350 MHz, 10X with readout
	GTP-501R	Passive probe, 500MHz, 10X with readout
Drivers		
	USB driver	LabVIEW driver

Package Contents

Check the contents before using the GDS-3000.

Opening the Box

Contents
- Main unit
- Probe set

  GTP-151R for GDS-3152 / GDS-3154
  GTP-251R for GDS-3252 / GDS-3254
  GTP-351R for GDS-3352 / GDS-3354
  GTP-501R for GDS-3502 / GDS-3504

- Power cord
- User manual (this document)

Note
- For detailed probe specifications, see page 202.
- The programming manual, PC software, and USB driver are downloadable from the GW Instek website. Visit www.gwinstek.com, in the oscilloscope section.

LCD Display		8" SVGA TFT color LCD. 800 x 600 resolution, wide angle view display.

Menu Key

Menu
Off

Use the Menu Off key to hide the onscreen menu system.

Side Menu Keys

Bottom Menu Keys

The Side menu and Bottom menu keys are used to make selections from the soft-menus on the LCD user interface.

To choose menu items, use the 7 Bottom menu keys located on the bottom of the display panel.

To select a variable or option from a menu, use the Side menu keys on the side of the panel. See page 32 for details.
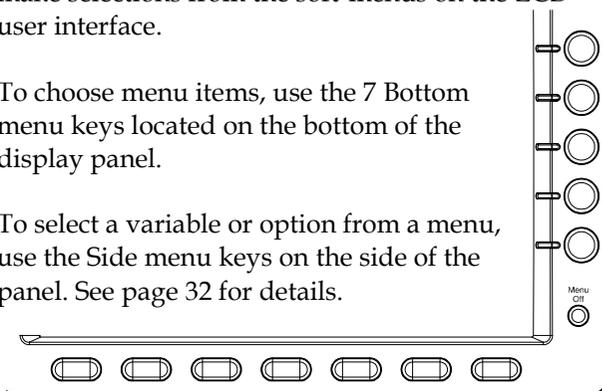

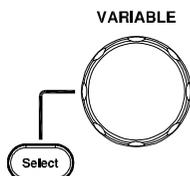

Print/Save Key

○ Print

○ Save

The print/save key is a quick save or quick print key, depending on its configuration. For more information see pages 155(save) or 175(print).
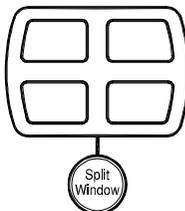

Variable Knob and Select Key

VARIABLE

Select

The Variable knob is used to increase/decrease values or to move between parameters.

The select key is used to make selections.

|		
Split Window Cluster		Use the Split Window key to cycle between single and split screen mode. For more details on windowing, see page 66.
	Split Window	
Horizontal Controls		The horizontal controls are used to change the position of the cursor, set the time base settings, and to zoom into the waveforms.
Horizontal Position	POSITION ◁ ▷	The Position knob is used to position the waveforms horizontally on the display screen.
Zoom	Zoom	Press Zoom in combination with the horizontal POSITION knob.
TIME/DIV	TIME/DIV	The Time/Div knob is used to change the horizontal scale.
Trigger Controls		The trigger controls are used to control the trigger level and options.
Level Knob	LEVEL	Used to set the trigger level.
Trigger Menu Key	Menu	Used to bring up the trigger menu.
50% Key	50 %	Sets the trigger level to the half way point (50%).
Force - Trig	Force - Trig	Press to force an immediate trigger of the waveform.

Autoset	Autoset	Press the Autoset key to automatically set the trigger, horizontal scale and vertical scale.
Run/Stop Key	Run/Stop	Press to freeze (Stop) or continue (Run) signal acquisition (page59).
Single	Single	Sets the acquisition mode to single triggering mode.
Default Setup	Default Setup	Resets the oscilloscope to default settings.
Auto-Range	Auto-Range	Sets the oscilloscope range automatically.
Vertical POSITION	POSITION	Sets the vertical position of the waveform.
Channel Menu Key	CH4	Press the CH1~4 key to set the channel.
VOLTS/DIV Knob	VOLTS/DIV	Sets the vertical scale.
Input Terminals	CH4	Accepts input signals. Input impedance, selectable: 50Ω, 75Ω, 1MΩ.
Math Key	M	Use the math key to set and configure math functions.
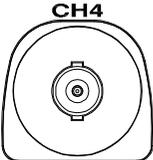

Reference Key	(R)	Press the Reference key to set or remove reference waveforms.
BUS Keys	(B1) (B2)	The Serial bus decode keys are used for UART, I²C and SPI serial bus interface decoding. The serial bus decode function is an optional extra. See page 95 for details.
Function Keys	The Function Keys are used to enter and configure different functions on the GDS-3000.	
Measure	(Measure)	Configures and runs automatic measurements.
Cursor	(Cursor)	Configures and runs cursor measurements.
Test	(Test)	Configures and runs GW Instek applications and optional functions such as the Power Analysis measurement software.
Acquire	(Acquire)	Configures the Acquisition mode.
Display	(Display)	Configures the display settings.
Help	(Help)	Shows the Help menu.
Save/Recall	(Save/Recall)	Used to save and recall waveforms, images and panel settings.
Utility	(Utility)	Configures the print/save key, display time, language and calibration.
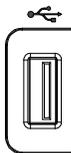

|		
USB Host Port		TypeA, 1.1/2.0 compatible. Used for data transfer.
Ground Terminal		Accepts the DUT ground lead for common ground.
Probe Compensation Output	≈2V ⊓	Outputs 2Vp-p, square wave signal for probe compensation (page 190).
External Trigger Input	EXT TRIG	Accepts external trigger signals (page 125). Input impedance: 1MΩ±3%, Voltage input: ±15V(peak), EXT trigger capacitance:~16pF.
Power Switch	POWER	Used to turn the power on/off. I: ON O: OFF

Rear Panel

Trigger output   Go/No Go output   Video Out   RS232C Output   Line out   LAN Port

Ground strap connector

Calibration output

USB Device/ Host port

Key lock   Fan   Power input socket   Rear stand

|		
Calibration Output	CAL	Outputs the signal for vertical scale accuracy calibration (page 187).
Trigger Output	Trig. Out	Outputs the trigger timing.
Go-No Go Output	Go / No Go (Open collector)	Outputs Go-No Go test results (page 87) as 500us pulse signal.
Video Out	Video Out	Outputs SVGA resolution to an external display.
RS232	RS232	RS232 remote control.
Line Out	Line Out	Audio line out.

| LAN Port		Ethernet port.
Ground Strap Connector		For use with a grounding strap.
USB Device Port		The USB device port is used for remote control and for the FreeWave remote control software. USB 1.1/2.0 high speed compatible.
USB Host		The USB host port supports USB flash drives for external memory. USB 1.1/2.0 high speed compatible.
Security Slot		Kensington security slot compatible.
Power Input Socket		Power cord socket accepts AC mains, 100 ~ 240V, 50/60Hz. For power up sequence, see page 29.

Display
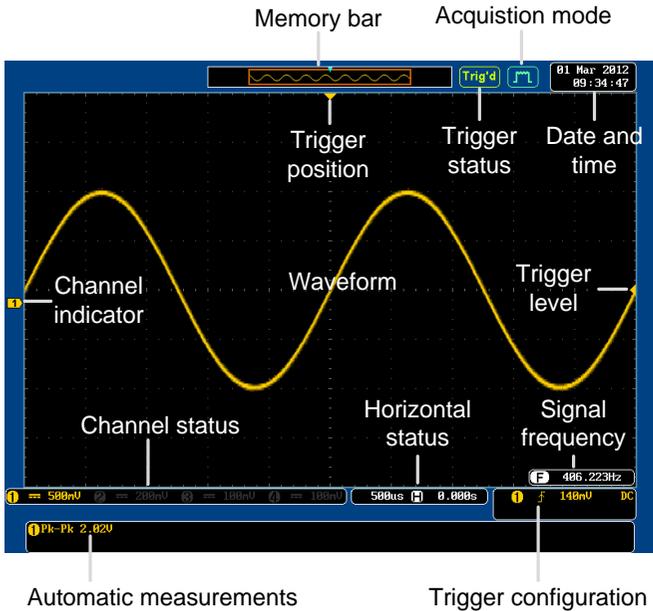

Waveforms   Shows input signal waveforms.

                     Channel 1: Yellow   Channel 2: Blue

                     Channel 3: Pink   Channel 4: Green

Channel Indicator   The channel indicator shows the zero volt level of
                     the signal waveform for each activated channel.
                     The active channel is shown with a solid color.

                     ![M] Math   ![B1] Bus (B1)

                     ![3] Active channel   ![1] Reference waveform
                     (CH3)   (Ref1)

                     ![4] Activated channel
                     (CH4)

Trigger Position   Shows the position of the trigger.

Horizontal Status   Shows the horizontal scale and position.

Date and Time	06 Sep 2010 18:19:05	Current date and time (page 144).
Memory Bar		
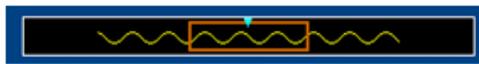

The ratio and the position of the displayed waveform compared with the internal memory (page 112).

Trigger Status	Trig'd	Triggered.
	Trig?	Not triggered, display not updated.
	Stop	Trigger stopped. Also appears in Run/Stop (page59).
	Roll	Roll mode.
	Auto	Auto trigger mode.

For trigger details, see page 125.

Acquisition Mode		Normal mode
		Peak detect mode
		Hi Resolution
		Average mode

For acquisition details, see page 100.
Signal Frequency	F 60.9033Hz	Shows the trigger source frequency.
	F <2Hz	Indicates the frequency is less than 2Hz (lower frequency limit).

Trigger Configuration	**1** ⌐ 140mV DC	Trigger source, slope, voltage, coupling.
	1 NTSC F1 1 AC	Trigger source, trigger (video), field, line, coupling.

For trigger details, see page 125.

|		
Channel Status	**1** ↓ ∿ 1V	Channel 1, inverted, AC coupling, 1V/Div
	1 ═ 1V	Channel 1, GND coupling, 1V/Div

For channel details, see page 117.

Set Up

Tilt Stand

Upright   Turn the legs under the casing as shown below to have the instrument sit upright.
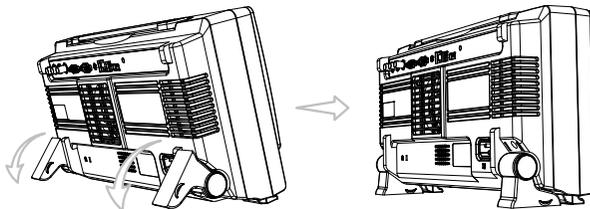

Tilt   To tilt, tilt the legs back behind the casing, as shown below.

Power Up

Step

1. Connect the power cord to the rear panel socket.
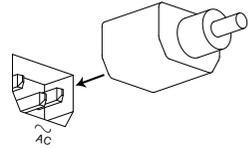

2. Press the POWER key. The display becomes active in ~ 30 seconds.

   POWER

   I: ON

   O: OFF

Note

The GDS-3000 recovers the state right before the power is turned OFF. The default settings can be recovered by pressing the Default key on the front panel. For details, see page 160.

First Time Use

Background	This section describes how to connect a signal, adjust the scale, and compensate the probe. Before operating the GDS-3000 in a new environment, run these steps to make sure the instrument performs at its full potential.

|		
1. Power On	Follow the procedures on the previous page.	
2. Set the Date and Time	Set the date and time.	Page 144
3. Reset System	Reset the system by recalling the factory settings. Press the *Default* Setup key on the front panel. For details, see page 160.	Default Setup
4. Install Optional Software	The optional software packages (Power Analysis, Serial Bus Decode) can be activated.	Page 192
5. Connect Probe	Connect the probe to the CH1 input terminal and probe compensation signal output (2Vp-p, 1kHz square wave).	
	Set the probe attenuation to x10 if the probe has adjustable attenuation.	
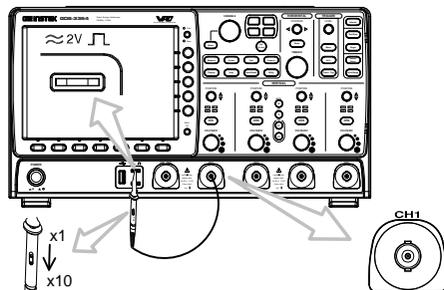

6. Capture Signal (Autoset)

Press the *Autoset* key. A square waveform appears on the center of the screen. For Autoset details, see page 58.
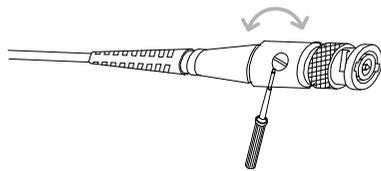

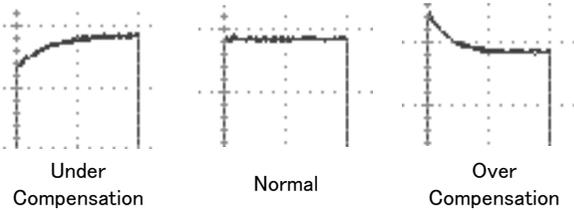

Autoset
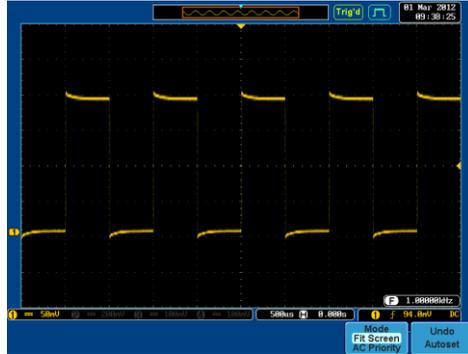

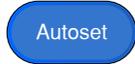

7. Select Vector Waveform

Press the *Display* key, and set the display to *Vector* on the bottom menu.

Display

Dot Vector

8. Compensate Probe

Turn the adjustment point on the probe to make the square waveform edge flat.

Under Compensation

Normal

Over Compensation

9. Start Operation Continue with the other operations.

How to Use This Manual

Background   This section describes the conventions used in this
                 manual to operate the GDS-3000.

                 Throughout the manual any reference to pressing
                 a menu key refers to the keys directly below or
   beside any menu icons or parameters.

                 When the user manual says to "toggle" a value or
                 parameter, press the corresponding menu item.
                 Pressing the item will toggle the value or
                 parameter.

                 Active parameters are highlighted for each menu
                 item. For example in the example below, Coupling
                 is currently set to DC.

                 If a menu item can be toggled from one value or
                 parameter to another, both options will be visible,
                 with the current option highlighted. In the
                 example below the slope can be toggled from a
                 rising slope to a falling slope.

Menu item   Menu item

Coupling   **Slope**
DC

Parameter   Active   Optional
                            parameter   parameter
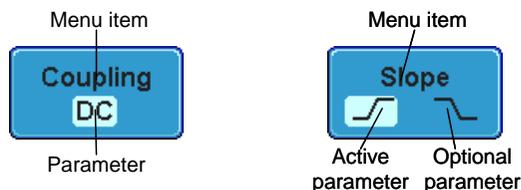

Selecting a Menu Item or Parameter   When the user manual says to "select" a value from one of the side menu parameters, first press the corresponding menu key and use the variable knob to either scroll through a parameter list or to increase or decrease a variable.

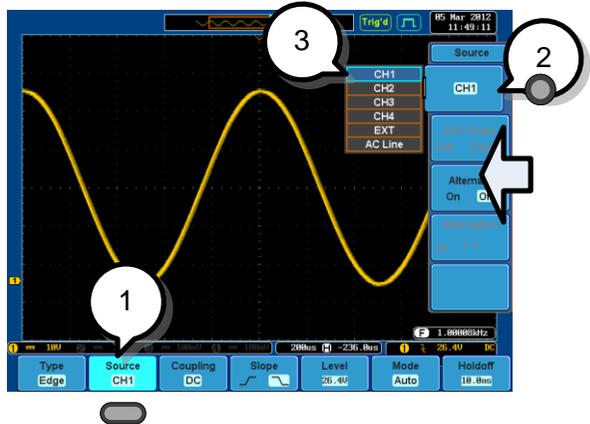

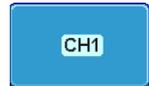

Example

1. Press a bottom menu key to access the side menu.

   Source
   CH1

2. Press a side menu key to either set a parameter or to access a sub menu.

   CH1

3. If accessing a sub menu or setting a variable parameter, use the variable knob to scroll through menu items or variables. Use the select key to confirm and exit.

   Up Down
   VARIABLE

   Select

4. Press the same bottom menu key again to reduce the side menu.

   Source
   CH1

Toggling a Menu
Parameter

1. Press the bottom menu key to toggle the parameter.

Reduce Lower
Menu

1. Press the relevant function key again to reduce the bottom menu. For example: press the trigger menu key to reduce the trigger menu.

Remove All Menus

1. Press the Menu Off key to reduce each menu level.

QUICK REFERENCE

This chapter describes the GDS-3000 menu tree, shortcuts to major operations, built-in Help access, and default factory settings. Use them as a handy reference to get a quick access to the functionality.
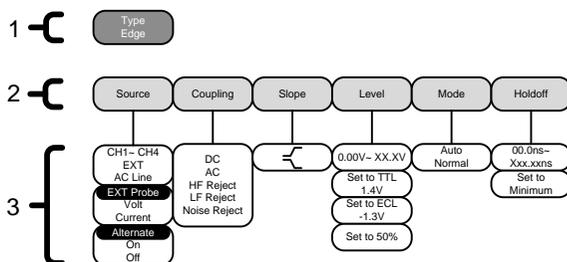

Menu Tree / Operation Shortcuts

Convention

For all menu trees, bottom menu keys are shown as grey icons and side menu keys are shown in white. All menu tree operations are shown in order from top to bottom.

Below is an example of the menu tree operation for the trigger source menu and a comparison to the operation on the DSO screen.

Built-in Help

The Help key accesses a context sensitive help menu. The help menu contains information on how to use the front panel keys.

Panel Operation   1. Press the *Help* key. The display changes to Help mode.

Help

2. Use the Variable knob to scroll up and down through the Help contents. Press *Select* to view the help on the selected item.

Home Key   Press the *Home* key to return to the main help screen.

Go Back   Press the *Back* key to go to the previous menu page.

Exit   Press the *Help* key again or press the *Exit* key to exit the Help mode.

Help

MEASUREMENT

Basic Measurement

This section describes the basic operations required in capturing and viewing the input signal. For more detailed operations, see the following chapters.

- Cursor Measurement → from page 76
- Configuration → from page 87

Before operating the oscilloscope, please see the Getting Started chapter, page 10.

Channel Activation

Activate Channel

To activate an input channel, press a *channel* key.

CH1 → CH1

When activated, the channel key will light up. The corresponding channel menu will also appear.

Each channel is associated with the color shown beside the VOLTS/DIV dial: CH1: yellow, CH2: blue, CH3: pink and CH4: green.

When a channel is activated, it is shown above the bottom menu system.

CH1   CH2   CH3   CH4
① ⎓ 1V ② ⎓ 100mV ③ ⎓ 100mV ④ ⎓ 100mV

De-activate Channel

To de-activate a channel, press the corresponding *channel* key again. If the channel menu is not open, press the *channel* key twice (the first press shows the Channel menu).

CH1 → CH1

| Default Setup | To activate the default state, press *Default Setup*. | Default Setup |

| Autoset | The *Autoset* key (page 58) does NOT automatically activate the channels to which input signals are connected. |

Autoset

| Background | The Autoset function automatically configures the panel settings to position the input signal to the best viewing condition. The GDS-3000 automatically configures the following parameters. |

- Horizontal scale
- Vertical scale
- Trigger source channel

There are two operating modes for Autoset function: Fit Screen Mode and AC Priority Mode.

Fit Screen Mode will fit the waveform to the best scale, including any DC components (offset). AC priority mode will scale the waveform to the screen removing any DC component.

| Panel Operation | 1. Connect the input signal to the GDS-3000 and press the *Autoset* key. | Autoset |

2. The waveform appears in the center of the display.
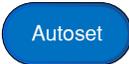

Before   After
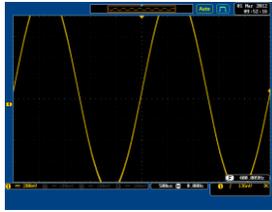

3. To undo Autoset, press *Undo*
    Autoset from the bottom menu.
    To remove the *Undo Autoset*
    softkey, press any other key.

Change modes   1. Choose between *Fit Screen Mode*
                    and *AC Priority Mode* from the
                    bottom menu.

                2. Press the *Autoset* key again to use
                    Autoset in the new mode.
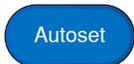

Fit Screen Mode   AC Priority
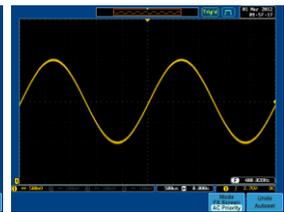

Limitation   Autoset does not work in the following situations.

                • Input signal frequency is less than 20Hz

                • Input signal amplitude is less than 30mV

Auto-Range

Background   The Auto-Range function works similarly to the Autoset function, except the Auto-Range function works continuously when it is on. The Auto-Range function will continuously monitor the input signal and adjust the horizontal and vertical scale of a displayed signal so that waveform(s) are displayed at the best possible scale.

     In addition, the Auto-Range function can also be configured to only adjust the vertical or horizontal scale.

     There are two operating modes for the Auto-Range function: Fit Screen Mode and AC Priority Mode.

     Fit Screen Mode will fit the waveform to the best scale, including any DC components (offset). AC priority mode will scale the waveform to the screen removing any DC component.

Panel Operation   1. After a signal has already been triggered, press the *Auto-Range* key. The Auto-Range key lights up.   Auto-Range → Auto-Range

2. The waveform appears in the center of the display.

     Before   After
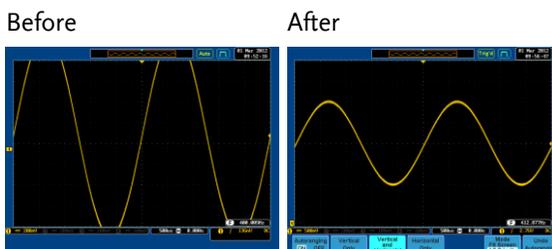

3. To undo Auto-Range, press *Undo Autoranging* from the bottom menu.
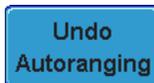

Undo Autoranging

Disable Auto-Range	Press *Autoranging* from the bottom menu to turn Auto-Range On/Off.
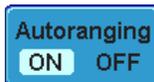

Autoranging
ON OFF

Configure Auto-Range	Press *Vertical Only* for vertical autoranging only.

Vertical Only

Press *Horizontal Only* for horizontal autoranging only.

Horizontal Only

Press *Horizontal and Vertical* for autoranging on both axes.

Vertical and Horizontal

Change modes	1. Choose between *Fit Screen Mode* and *AC Priority Mode* from the bottom menu.

Mode Fit Screen AC Priority
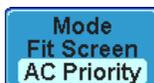

2. Press the *Auto-Range* key twice to reset the Auto-Range function.

Auto-Range

x2
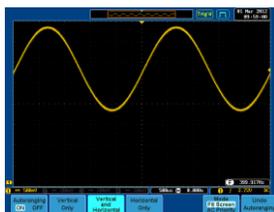

Fit Screen Mode   AC Priority
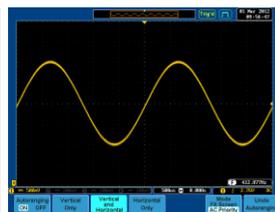

Limitation	Auto-Range does not work in the following situation.

- Input signal frequency is less than 20Hz
- Input signal amplitude is less than 30mV

Run/Stop

Background	By default, the waveform on the display is constantly updated (Run mode). Freezing the waveform by stopping signal acquisition (Stop mode) allows flexible observation and analysis. To enter Stop mode, two methods are available: pressing the Run/Stop key or using the Single Trigger mode.
	Stop mode icon When in Stop mode, the Stop icon appears at the top of the display.
	Triggered icon
Freeze Waveform by Run/Stop Key	Press the *Run/Stop* key once. The waveform and signal acquisition freezes. To unfreeze, press the *Run/Stop* key again.
Freeze Waveform by Single Trigger Mode	In the Single Trigger mode, the waveform always stays in the Stop mode, and is updated only when the *Single* key is pressed. When the *single* key is pressed, the Run/Stop key turns red. For details, see page 125.
Waveform Operation	The waveform can be moved or scaled in both Run and Stop mode, but in different manners. For details, see page 112 (Horizontal position/scale) and page 117 (Vertical position/scale).

Horizontal Position/Scale

For more detailed configuration, see page 112.

Set Horizontal Position	The horizontal position knob moves the waveform left and right.	POSITION ◁ ○ ▷
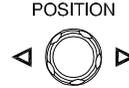

As the waveform moves, the memory bar on the top of the display indicates the portion of the waveform currently shown on the display and the position of the horizontal marker on the waveform.
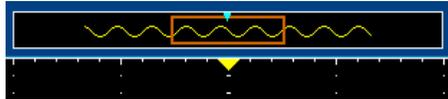

Position Indicator The horizontal position is shown at the bottom of the display grid to the right of H icon.

Select Horizontal Scale	To select the timebase (scale), turn the *TIME/DIV* knob; left (slow) or right (fast).	TIME/DIV Left ↶ ↷ Right
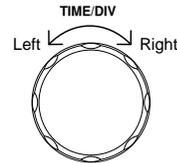

Range	1ns/div ~ 100s/div, 1-2-5 increments (1-2.5-5 for GDS350X.

The Time/Division rate is displayed to the left of the H icon at the bottom of the screen.

Memory bar   The size of the memory bar changes to reflect the timebase and the section of the waveform that is displayed on screen.

Fast

Medium

Slow
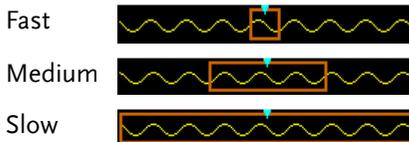

The Sample rate changes according to the time/division. For example the sample rate of the GDS-3304 at different time bases is shown below.

10ms   5ms   2ms

250KPS   500KSPS   1MSPS
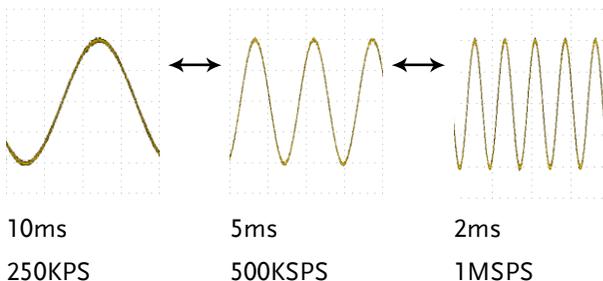

Stop mode   In the Stop mode, the waveform size changes according to the scale.

Vertical Position/Scale

For more detailed configuration, see page117.

Set Vertical Position	To move the waveform up or down, turn the *vertical position knob* for each channel.	
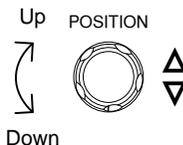

As the waveform moves, the vertical position of the cursor appears on the display.
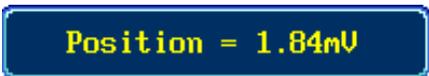

Position = 1.84mV

	Run/Stop mode	The waveform can be moved vertically in both Run and Stop mode.
Select Vertical Scale	To change the vertical scale, turn the *VOLTS/DIV* knob; left (down) or right (up).	
	Range	2mV/div ~ 1V/div (50Ω/75Ω)/, 2mV/div ~ 5V/div (1MΩ)
		1-2-5 increments
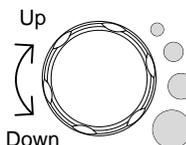

The vertical scale indicator for each channel on the bottom of the display changes accordingly.

Split Window Mode

The split window mode is able to display and trigger each active channel independently. The split window mode is especially useful for signal comparisons. Reference waveforms can also be used in this mode. Most functions and features can be used with split screen mode except for the Math, XY display and Zoom mode.

Enter Split Screen Mode

1. Activate each channel that is to be used in the split screen mode.   **CH1** → **CH1**   page 57

2. Press the *Split Window* key to enter the split screen mode.   Split Window

3. Split window mode appears. The number of windows depends on the number of active channels. 1-2 active channels will produce 2 split windows, while 3-4 active channels will produce 4 split windows.

    The split window that has the active channel is shown with an orange border.

Example   4 channel split window   2 channel split window
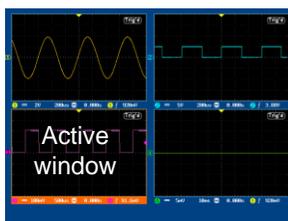

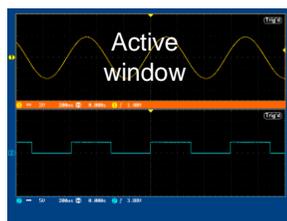

Select Active Channel	To select the active channel, press the corresponding split window key:

4 Window split screen: 2 window split screen:

Window 1	Window 2
Window 3	Window 4

Window 1	Window 1
Window 2	Window 2
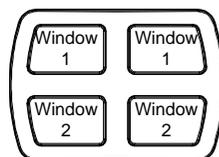

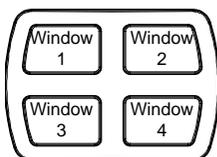

Reference Waveforms	Reference waveforms can also be used in this mode. Each reference waveform will be recalled to the corresponding split window number. I.e., Ref1 will be recalled to the first split window, Ref2 to the second window and so on.

Use Active Channel Settings	To return to full screen mode using the settings of the active channel, press the ⬛⬛→☐ button.

Exit Split Window mode	To exit split window mode, press the *Split Window* key again.

Automatic Measurement

The automatic measurement function measures and updates major items for Voltage/Current, Time, and Delay type measurements.

Measurement Items

	V/I Measurements		Time Meas.		Delay Meas.	
Overview	Pk-Pk		Frequency		FRR	
	Max		Period		FRF	
	Min		RiseTime		FFR	
	Amplitude		FallTime		FFF	
	High		+Width		LRR	
	Low		-Width		LRF	
	Average		Dutycycle		LFR	
	RMS				LFF	
	ROVShoot				Phase	
	FOVShoot					
	RPREShoot					
	FPREShoot					
Voltage/Current Measurement	Pk-Pk (peak to peak)		Difference between positive and negative peak voltage (=Vmax − Vmin)			
	Max		Positive peak voltage			
	Min		Negative peak voltage			
	Amplitude		Difference between global high and global low voltage (=Vhi − Vlo)			

	High		Global high voltage
	Low		Global low voltage
	Average		Averaged voltage of the first cycle
	RMS		RMS (root mean square) voltage
	ROVShoot		Rise overshoot voltage
	FOVShoot		Fall overshoot voltage
	RPREShoot		Rise preshoot voltage
	FPREShoot		Fall preshoot voltage
Time Measurement	Frequency		Frequency of the waveform
	Period		Waveform cycle time (=1/Freq)
	RiseTime		Rising time of the pulse (~90%)
	FallTime		Falling time of the pulse (~10%)
	+Width		Positive pulse width
	–Width		Negative pulse width
	Duty Cycle		Ratio of signal pulse compared with whole cycle =100x (Pulse Width/Cycle)
Delay Measurement	FRR		Time between: Source 1 first rising edge and Source 2 first rising edge
	FRF		Time between: Source 1 first rising edge and Source 2 first falling edge
	FFR		Time between: Source 1 first falling edge and Source 2 first rising edge
	FFF		Time between: Source 1 first falling edge and Source 2 first falling edge
	LRR		Time between: Source 1 first rising edge and Source 2 last rising edge
	LRF		Time between: Source 1 first rising edge and Source 2 last falling edge
	LFR		Time between: Source 1 first falling edge and Source 2 last rising edge
	LFF		Time between: Source 1 first falling edge and Source 2 last falling edge
	Phase		The phase difference of two signals, calculated in degrees. T1÷T2×360.

Individual Mode

Individual mode shows up to eight selected measurement items on bottom of the screen from any channel source.

Add Measurement Item

1. Press the *Measure* key.

2. Press *Add Measurement* from the bottom menu.

3. Choose either a *V/I*, *Time* or *Delay* measurement from the side menu.
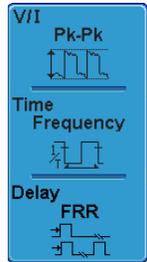

V/I (Voltage/ Current)	Pk-Pk, Max, Min, Amplitude, High, Low, Average, RMS, ROVShoot, FOVShoot, RPREShoot, FPREShoot
Time	Frequency, Period, RiseTime, FallTime, +Width, –Width, Duty Cycle
Delay	FRR, FRF, FFR, FFF, LRR, LRF, LFR, LFF, Phase

4. All individual measurements will be displayed in a window on the bottom of the screen. The channel number and channel color indicate the measurement source: yellow = CH1, blue = CH2, pink = CH3, green = CH4.

Choose a Source   The channel source for measurement items can be set either before or when selecting a measurement item.

1. To set the source, press either the *Source1* or *Source2* key from the side menu and choose the source. Source 2 is only for delay measurements.

    | Source1 |
    | CH1 |

    | Source 2 |
    | CH2 |
    Range   CH1, CH2, CH3, CH4

Split Window Mode   Individual mode can be used with the split window mode. Each individual measurement will be displayed in the split window that houses the source of the measurement.

Delay measurements are not supported as only one source can be used for each measurement in split window mode.

Remove Measurement

Individual measurements can be removed at any time using the Remove Measurement function.

Remove Measurement Item

1. Press the *Measure* key.

    | Measure |

2. Press *Remove Measurement* from the bottom menu.

    | Remove Measurement |

3. Choose which measurement window (if in split window mode) the item is located in (*Window 1~4*) and use the variable knob to remove an item.

    | Window 1 |

Remove All Items Press *Remove All* to remove all the
                  measurement items in full screen
                  mode, or to remove all the
                  measurement items for the active
                  window in split screen mode.

> Remove All
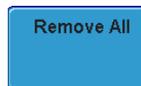

Gated mode

Some automatic measurements can be limited to a "gated" area
between cursors. Gating is useful for measuring a magnified
waveform or when using a fast time base. The Gated mode has
three possible configurations: Off (Full Record), Screen and
Between Cursors.

Set Gating Mode 1. Press the *Measure* key.

> Measure

                 2. Press *Gating* from the bottom
                    menu.

> Gating
> Off

                 3. Choose one of the gating modes
                    from the side menu: *Off (Full
                    Record)*, *Screen*, *Between Cursors*

> Off
> (Full Record)
>
> Screen
>
> Between
> Cursors
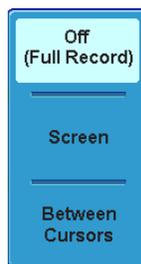

Cursors On   If *Between Cursors* is selected, the   Page 76
Screen   cursor positions can be edited by
                 using the cursor menu.

Display All mode

Display All mode shows and updates all items from Voltage and Time type measurements.

View Measurement Results

1. Press the *Measure* key.

    [Measure]

2. Press *Display All* from the bottom menu.

    [Display All OFF]

3. Choose a channel (*CH1, CH2, CH3, CH4*) from the side menu to display auto measurement items.

    Note: only the channels that are activated are available.

4. The results of Voltage and Time type measurements appear on the display.

Remove Measurements

To remove the measurement results, press *OFF*.

    [OFF]

Delay
Measurements
Delay type measurement is not available in this mode as only one channel is used as the source. Use the Individual measurement mode (page 71) instead.

Cursor Measurement

Horizontal or vertical cursors are used to show the position and values of waveform measurements and math operation results. These results cover voltage, time, frequency and other math operations. When the cursors (horizontal, vertical or both) are activated, they will be shown on the main display unless turned off. (page 111).

Use Horizontal Cursors

Panel Operation/ Range

1. Press the *Cursor* key once.

Cursor

2. Press *H Cursor* from the bottom menu.

H Cursor

3. Press H Cursor repeatedly to toggle the cursor type.
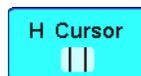

H Cursor

Range

Example

Math Operation

Overview

Background	Math operation runs addition, subtraction, multiplication, division or FFT using the input signals or reference waveforms (Ref1~4) and shows the result on the display. The resulted waveform characteristics can be measured using the cursors.

Addition (+)	Adds the amplitude of two signals.	
	Source	CH1~4, Ref1~4
Subtraction (−)	Extracts the amplitude difference between two signals.	
	Source	CH1~4, Ref1~4
Multiplication (✕)	Multiplies the amplitude of two signals.	
	Source	CH1~4, Ref1~4
Division (÷)	Divides the amplitude of two signals.	
	Source	CH1~4, Ref1~4
FFT	Runs FFT calculations on a signal. Four types of FFT windows are available: Hanning, Hamming, Rectangular, and Blackman.	
	Source	CH1~4, Ref1~4
Hanning FFT Window	Frequency resolution	Good
	Amplitude resolution	Not good
	Suitable for....	Frequency measurement on periodic waveforms

Hamming FFT Window	Frequency resolution	Good
	Amplitude resolution	Not good
	Suitable for....	Frequency measurement on periodic waveforms

Rectangular FFT Window	Frequency resolution	Very good
	Amplitude resolution	Bad
	Suitable for....	Single-shot phenomenon (this mode is the same as having no window at all)

Blackman FFT Window	Frequency resolution	Bad
	Amplitude resolution	Very good
	Suitable for....	Amplitude measurement on periodic waveforms

Addition/Subtraction/Multiplication/Division

Panel Operation   1. Press the *Math* key.

2. Press the *Math* key on the lower bezel.
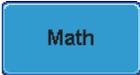

3. Select *Source 1* from the side menu

    Range   CH1~4, Ref~4

4. Press *Operator* to choose the math operation.
    Range   +, -, ×, ÷

5. Select *Source 2* from the side menu.

| Source2 |
| CH1 |

  Range   CH1~4, Ref~4

6. The math measurement result appears on the display. The vertical scale of the math waveform appears at the bottom of the screen.

  | M | ① + ③ | 5V |

  From left: Math function, source1, operator, source2, Unit/div

Example
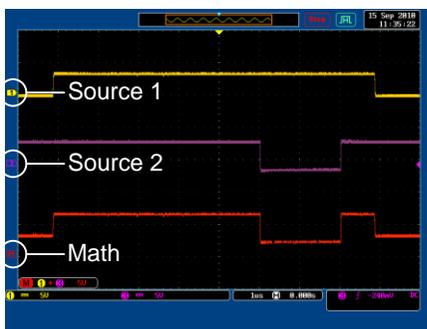

Position and Unit To move the math waveform vertically, press the *Position* key from the side menu and use the variable knob to set the position.

| Position |
| ⟳ 0.00Div |

To change the unit/div settings, press *Unit/div*, then use the variable knob change the unit/div.

| Unit/div |
| ⟳ 100mV |

  Range   2mV~1kV (1-2-5 steps)

Turn Off Math To turn off the Math result from the display, press the *Math* key again.

(M)

FFT

Panel Operation   1. Press the *Math* key.

                                                                      M

                   2. Press *FFT* from the bottom menu.

                                                                    FFT
                   3. Select the *Source* from the side
                      menu.
                                                                  Source
                                                                   CH1

                         Range   CH1~4, Ref~4

                   4. Press the *Vertical Units* key from
                      the side menu to select the vertical   Vertical Units
                      units used.   dBV RMS

                         Range   Linear RMS, dBV RMS
                   5. Press the *Window* key from the side
                      menu and select the window type.   Window
                                                                 Hanning

                         Range   Hanning, Hamming, Rectangular,
                                      and Blackman.

                   6. The FFT result appears. For FFT, the horizontal
                      scale changes from time to frequency, and the
                      vertical scale from voltage/current to dB/RMS.
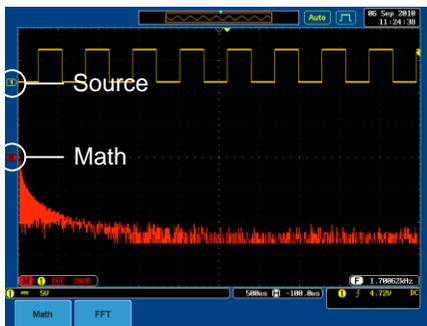

Position and Unit	To move the FFT waveform vertically, press *Position* and use the variable knob.	**Position** ↻ 0.00Div
	Range −12.00 Div ~ +12.00 Div	
	To select the vertical scale of FFT waveform, press *Unit/div* and use the variable knob.	**Unit/div** ↻ 20dB
	Range 2mV~1kV RMS, 1~20 dB	
Clear FFT	To clear the FFT result from the display, press the *Math* key again.	M

Applications

Overview

Background   The APP. function allows different applications to
                    be run. Applications can be downloaded from the
                    GW Instek website.

Included   GO-NOGO   The GO_NOGO application can be
Applications   used to set threshold boundaries
                                     for input signals. GO-NOGO
                                     checks if a waveform fits inside a
                                     user-specified maximum and
                                     minimum amplitude boundary
                                     (template).

Running Applications

Background   The APP. function can host a number of different
                    applications that can be downloaded from the GW
                    Instek website.

Panel Operation   1. Press the *Test* key.

Test

                    2. Press *APP.* from the bottom menu.

APP.

3. Scroll through each Application using the Variable knob.

4. Select an application by pressing the *Select* key *twice*.

Select

×2
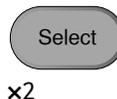

Uninstalling Applications

Background   Any APP. function can be easily uninstalled using the *Uninstall* function.

Panel Operation   1. Press the *Test* key.
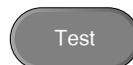

Test

2. Press *APP.* from the bottom menu.

APP.

3. Scroll through each Application using the
   Variable knob.

4. When the desired application is
   highlighted, press *Uninstall* to
   begin the uninstallation. Press
   again to confirm.

×2

Using Go_NoGo

Background   The Go-NoGo test checks if a waveform fits inside
                 a user-specified maximum and minimum
                 boundary (boundary template). Boundary
                 templates are automatically created from a source
                 channel. Boundary tolerance and violation
                 conditions can be set.
                 Choose the Go_NoGo application
                 from the APP. menu. See page 87.
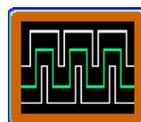

Go-NoGo   Select the Go-NoGo conditions (When) and actions
Conditions   when a Go-NoGo condition has been met
                (Violating).

                1. Press *When* from the bottom menu
                    and use the Variable knob to select
                    the When condition.

                    When   Exits: Sets the NoGo condition to
                                when the input signal exceeds the
                                limit boundary.

Enters: Sets the NoGo condition to when the input signal stays within the limit boundary.

2. Press *When* again to change the menu to *Violating*. Use the Variable knob to choose the action for when a violation occurs.

| When |
| ↓ |
| Violating |
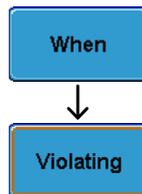

Violating   Stop: The waveform will be frozen.

Stop_Beep: The waveform will be frozen and a beep will be output.

Continue: Ignore the violation.

Continue_Beep: Output a beep, but continue to monitor the signal.

Source 1. Press *Compare Source* from the bottom menu and use the Variable knob to select the source.

| Compare Source |

Source   CH1, CH2, CH3, CH4

Tolerance Boundary

1. To set a tolerance, press *Compare Source* again to toggle the menu to *Auto Tolerance*. Use the Variable knob to choose the tolerance as a percentage.

| Compare Source |
| ↓ |
| Auto Tolerance |
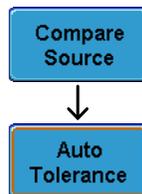

Violating   0.4% ~ 40% (.4% steps)

Note   If a tolerance is set, the maximum and minimum boundary is reset as the tolerance boundary.

Maximum and Minimum	1. To set a maximum and minimum boundary, press *Minimum Position* from the bottom menu and use the Variable knob to select the absolute minimum position.	Minimum Position

Position	Voltage division range

2. Press *Minimum Position* again to toggle the menu to Maximum Position. Choose the maximum position.

Minimum Position
↓
Maximum Position
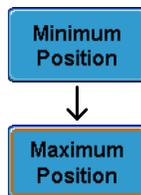

Position	Voltage division range

Note	If a maximum and minimum boundary is set, the tolerance will be disabled.

Save Boundary Limits	1. Select a *Maximum Position* or a *Tolerance* from the lower menu.	
	2. To save the Go-NoGo test parameters, press *Save Operation*. The Maximum position will be saved to R1. The tolerance waveforms will be saved to R1 and R2.	Save Operation
	3. If a *Maximum Position* was saved, repeat the save procedure for *Minimum Position*. The Minimum position waveform will be saved to R2.	

Start Go-NoGo	Press *Enable* to start the Go-NoGo test. The Enable button will change to Disable. Pressing *Disable* will stop the Go-NoGo test and toggle the button back to Enable.	**Enable** ↓ **Disable**
Exit the Application	To exit the application, press *Break*.	**Break**
Using the Go-NoGo Output	To output the Go-NoGo results to an external device, the Go-NoGo rear panel terminal (open collector) can be used. The Go-NoGo terminal will output a positive pulse each time a NoGo violation has occurred for a minimum of 10us. The voltage of the pulse depends on the external pull-up voltage.	Go / No Go (Open collector)
	The line out socket can also be used to connect directly to a buzzer.	Line Out
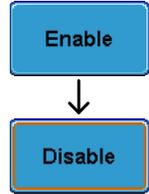

Timing Diagram
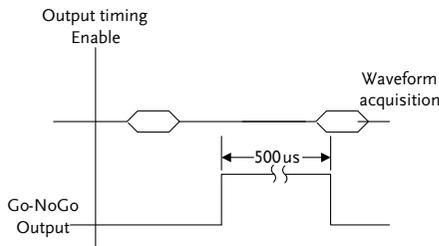

When a No-Go violation occurs the Go-NoGo output will go from a low level to a high level for a minimum of 500us.

Circuit Diagram
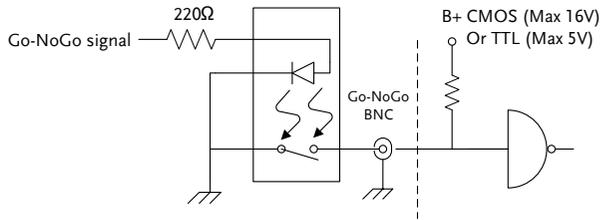

Power Analysis

Power analysis provides automatic measurement for a number of advanced measurement types such as power quality, harmonics, ripple and inrush current. The Power analysis software is an optional software module, for details please see page 192. Please see the Power Analysis manual for more details on using the power analysis software.

Power Analysis Overview

Power Quality	Power quality measures the power of a signal using the measured voltage and current of a signal.
Harmonics	The harmonics function shows signal harmonics up to the 400th harmonic. Harmonic tests can be user defined and common harmonic standards such as IEC 61000-3-2 can also be tested for.
Ripple	The ripple function calculates the ripple and noise of the waveform.
Inrush Current	The inrush function automatically calculates the first peak and second peak inrush current.

Serial Bus

The serial bus trigger and decode software includes support for 3 common serial interfaces, SPI (4 channel models only), UART and I²C. Each interface is fully configurable to accommodate a wide range of protocol variation.

Each input can be displayed as binary or hexadecimal. An event table can also be created to aid in debugging.

Note that the Serial bus trigger and decode software is an optional extra. An activation key is required to activate the software, for details please see page 192. Please see the Serial Bus Decode manual for more details on using the serial bus software.

Serial Bus Overview

UART   Universal Asynchronous Receiver Transmitter. The UART bus is able to accommodate a wide range of various common UART serial communications.
The UART serial bus software is suitable for a number of RS-232 protocol variants.

Inputs	Tx, Rx
Threshold	Tx, Rx
Configuration	Baud rate, Parity, Packets, End of packets, Input polarity
Trigger On	Tx Start Bit, Rx Start Bit, Tx End of Packet, Rx End of Packet, Tx Data, Rx Data, Tx Parity Error, Rx Parity Error

I²C   Inter Integrated Circuit is a two line serial data interface with a serial data line (SDA) and serial clock line (SCLK). The R/W bit can be configured.

Inputs	SCLK, SDA

	Threshold	SCLK, SDA
	Configuration	Addressing mode, Read/Write in address
	Trigger On	Start, Repeat Start, Stop, Missing Ack, Address, Data, Address/Data

SPI	The SPI (Serial Interface Peripheral) bus is fully configurable to accommodate the wide variety of SPI interfaces. This bus is only available on 4 channel models.	
	Inputs	SCLK, SS, MOSI, MISO
	Threshold	SCLK, SS, MOSI, MISO
	Configuration	SCLK edge, SS logic level, Word size, Bit order
	Trigger On	SS Active, MOSI, MISO, MOSI&MISO

CONFIGURATION

Acquisition

The Acquisition process samples the analog input signals and converts them into digital format for internal processing.

Select Acquisition Mode

Background	The acquisition mode determines how the samples are used to reconstruct a waveform.	
	Sample	This is the default acquisition mode. Every sample from each acquisition is used.
	Peak detect	Only the minimum and maximum value pairs for each acquisition interval (bucket) are used. This mode is useful for catching abnormal glitches in the signal.
	Hi Resolution	Performs boxcar averaging on the samples. This reduces white noise and increases the vertical resolution of the waveform.
	Average	Multiple acquired data is averaged. This mode is useful for drawing a noise-free waveform. To select the average number, use the Variable knob.
		Average number: 2, 4, 8, 16, 32, 64, 128, 256

Panel Operation   1.   Press the *Acquire* key.

Acquire

2. To set the Acquisition mode, press
    Mode on the bottom menu.

    Mode
    Sample

3. Select an acquisition mode from
    the side menu.

    Sample

    Peak Detect

    Hi Resolution

    Average
    128

Mode	Sample, Peak Detect, Hi Resolution, Average
Average sample	2, 4, 8, 16, 32, 64, 128, 256

Example   Sample   Peak Detect
           High Resolution   Average (256 times)
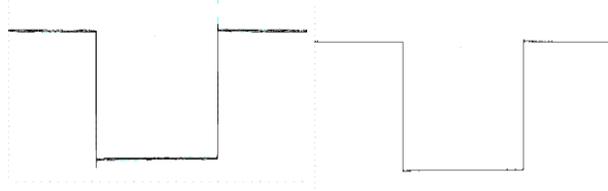

Show Waveform in XY Mode

Background	The XY mode maps the voltage of channel 1 to the voltage of channel 2. In 4 channel models, the voltage of channel 3 is mapped to the voltage of channel 4. This mode is useful for observing the phase relationship between waveforms.
	Reference waveforms can also be used in XY mode. Ref1 is mapped to Ref2 and Ref3 is mapped to Ref4. Using the reference waveforms is the same as using the channel input waveforms.

Connection	1. Connect the signals to Channel 1 (X-axis) and Channel 2 (Y-axis) or Channel 3 (X2-axis) and Channel 4 (Y2-axis).
	2. Make sure a channel pair is active (CH1&CH2 or CH3&CH4). Press the Channel key if necessary. A channel is active if the channel key is lit.
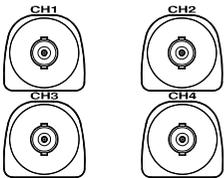

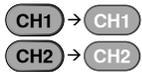

Panel Operation	1. Press the *Acquire* menu key.
	2. Press *XY* from the bottom menu.
	3. Choose *Triggered* XY from the side menu.

X-Y mode is split into two windows. The top window shows the signals over the full time range. The bottom window shows XY mode.

To move the X Y waveform position, use the vertical position knob: Channel 1 knob moves the X Y waveform horizontally, Channel 2 knob moves the X Y waveform vertically. Similarly, the X2 and Y2 axis can be positioned using the channel 3 and channel 4 vertical position knobs.
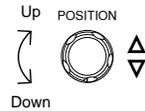

The horizontal position knob and Time/Div knob can still be used under the XY mode.

Turn Off XY Mode   To turn off XY mode, choose *OFF (YT)* mode.
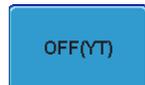

XY Mode   Cursors can be used with XY mode.   Page 76
                    See the Cursor chapter for details.

Set the Sampling Mode

Background   The GDS-3000 has two types of sampling modes: ET (Equivalent Time) and Sin(x)/x interpolation. Equivalent time sampling is able to achieve a sample rate of 100GSa/s when sampling periodic waveforms. Sin(x)/x interpolation uses a sinc interpolation formula to reconstruct a continuous signal between sampled points.

Panel Operation   1. Press the *Acquire* key.

Acquire
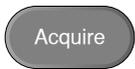

2. Press the *ET/sin(x)/x* key on the bottom menu to toggle between equivalent time sampling (ET) and sin(x)/x interpolation.

ET sin(x)/x
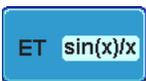

The sampling rate will be shown on the bottom right-hand corner
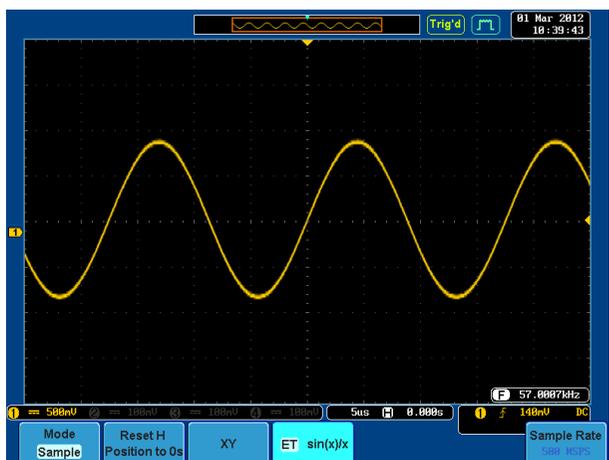

Real Time vs Equivalent Time Sampling Mode

Background	The sampling mode on the GDS-3000 can be switched between two sampling modes: Real-time and Equivalent-time. The number of active channels in operation will determine the sampling rate of the DSO. The sampling rate and mode depends on the number of active channels and whether the oscilloscope model has 2 or 4 channels.	
Parameter	Real-time sampling	One sample of data is used to reconstruct a single waveform. Real-time sampling is used when the time base is relatively slow or if single shot events need to be captured.
	Equivalent-time sampling	Sampled data is accumulated a number of times to reconstruct a single waveform. This increases the sampling rate, but can only be used for repetitive signals. This mode is usually used when the time base is too fast for real-time sampling.

Display

The Display menu defines how the waveforms and parameters appear on the main LCD display.

Display Waveform as Dots or Vectors

Background   When the waveform is displayed on screen, it can be displayed as dots or vectors.

Panel Operation 1. Press the *Display* menu key.
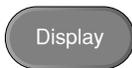

Display

2. Press *Dot Vector* to toggle between Dot and Vector mode.

Dot Vector
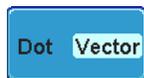

Range   Dots   Only the sampled dots are displayed.

Vectors   Both the sampled dots and the connecting line are displayed.

Example: Vectors (square wave)   Dots (square wave)
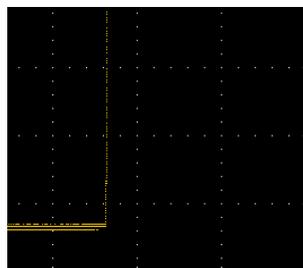

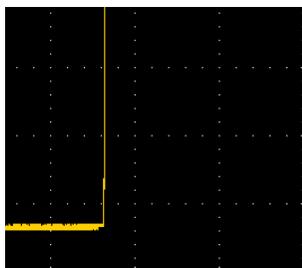

Set the Level of Persistence

Background   The persistence function allows the GDS-3000 to
                  mimic the trace of a traditional analog oscilloscope.
                  A waveform trace can be configured to "persist"
                  for designated amount of time.

Panel Operation   1. Press the *Display* menu key.

                  Display
                  2. To set the persistence time, press
                      the *Persistence* menu button on the
                      bottom bezel.

                  Persistence
                  100ms

                  3. Use the variable knob to select a
                      persistence time.

                  ⟳ Time
                     Infinite

                      Time   Auto, 100ms~10s, Infinite, VPO Off

Clear   To clear persistence, press *Clear
                  Persistence*.

                  Clear
                  Persistence
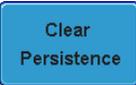

Set the Intensity Level

Background   The intensity level of a signal can also be set to
                  mimic the intensity of an analog oscilloscope by
                  setting the digital intensity level.

Panel Operation   1. Press the *Display* menu key.

                  Display
                  2. Press *Intensity* from the bottom
                      menu.

                  Intensity

Waveform
Intensity

3. To set the waveform intensity, press *Waveform Intensity* and edit the intensity.

    Range   0~100%

Graticule
Intensity

4. To set the graticule intensity, press *Graticule Intensity* from the side menu and edit the intensity value.

    Range   10~100%

Example   Waveform Intensity 0%   Waveform Intensity 100%
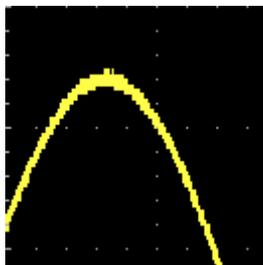

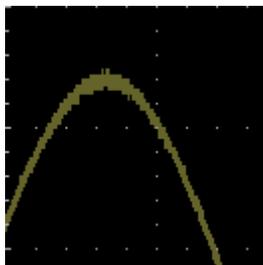

Graticule Intensity 10%   Graticule Intensity 100%
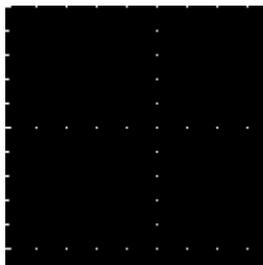

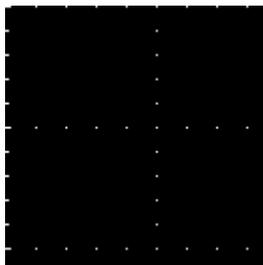

Set the Waveform Intensity Type

Background   The intensity gradient of a signal can be set to grayscale or color. If intensity is set to color, the intensity gradient is analogous to a thermal color gradient where high intensity areas are colored red and low intensity areas are colored blue.

Panel Operation   1. Press the *Display* menu key.
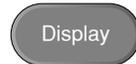

Display

2. Press *Waveform* from the bottom menu to toggle the intensity type.

Waveform
Gray Color

Range   Gray, Color

Example
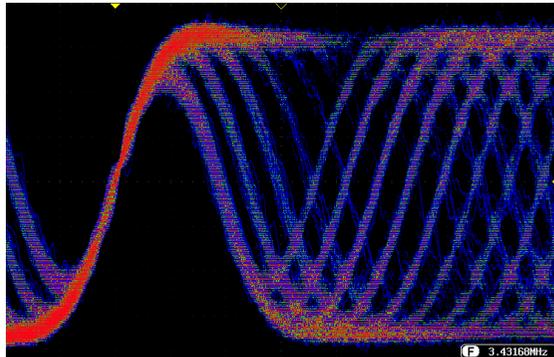

Select Display Graticule

Panel Operation   1. Press the *Display* menu key.
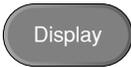

2. Press *Graticule* from the bottom menu.

3. From the side menu choose the graticule display type.

    Full: Shows the full grid; X and Y axis for each division.

    Grid: Show the full grid without the X and Y axis.

    Cross Hair: Shows only the center X and Y frame.

    Frame: Shows only the outer frame.

Freeze the Waveform (Run/Stop)

For more details about Run/Stop mode, see page 59.

Panel Operation   1. Press the *Run/Stop* key. To   [Run/Stop]
                     unfreeze the waveform, press the
                     Run/Stop key again.

                  2. The waveform and the trigger
                     freezes. The trigger indicator on
                     the top right of the display shows
                     Stop.
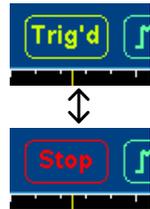

Turn Off Menu

Panel Operation   1. Press the *Menu Off* key
                     below the side menu keys to
                     reduce a menu. The menu
                     key needs to be pressed
                     each time to reduce one
                     menu.
                     See page 32 for more
                     information.

Horizontal View

This section describes how to set the horizontal scale, position, and waveform display mode.

Move Waveform Position Horizontally

Panel Operation   The horizontal position knob moves the waveform left/right.

POSITION

◁ ▷

As the waveform moves, a position indicator on the on the top of the display indicates the horizontal position of the waveform in memory.
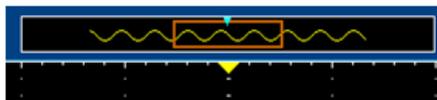

Reset Horizontal Position

1. To reset the horizontal position, press the Acquire key and then press *Reset H Position to 0s* from the bottom menu.

Acquire

Reset H
Position to 0s

Run Mode   In Run mode, the memory bar keeps its relative position in the memory since the entire memory is continuously captured and updated.

Select Horizontal Scale

Select Horizontal Scale	To select the timebase (scale), turn the TIME/DIV knob; left (slow) or right (fast).
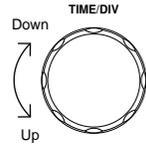

TIME/DIV
Down
Up

Range	1ns/div ~ 100s/div, 1-2-5 increment (1-2.5-5 for GDS-350X)

The timebase indicator updates as the TIME/DIV is adjusted.

Horizontal position
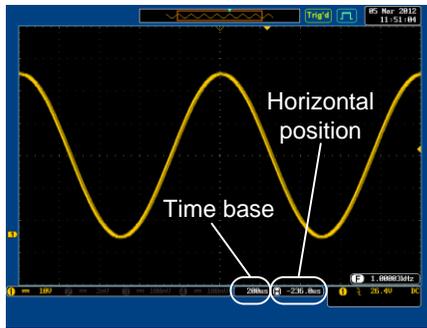

Time base

Run Mode	In Run mode, the memory bar and waveform size keep their proportion. When the time base becomes slower, roll mode is activated (if trigger is set to Auto).

Stop Mode	In Stop mode, the waveform size changes according to the scale.
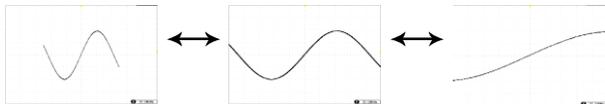

Select Waveform Update Mode

Background	The display update mode is switched automatically or manually according to the timebase and trigger.

Normal	Updates the whole displayed waveform at once. Automatically selected when the timebase (sampling rate) is fast.
	Timebase ≤50ms/div (≥50kSa/s)
	Trigger all modes

Roll Mode	Roll	Updates and moves the waveform gradually from the right side of the display to the left. Automatically selected when the timebase (sampling rate) is slow.
	Timebase ≥100ms/div (≤25kSa/S) 350MHz models (≤20kSa/S) 500MHz models
	Trigger all modes
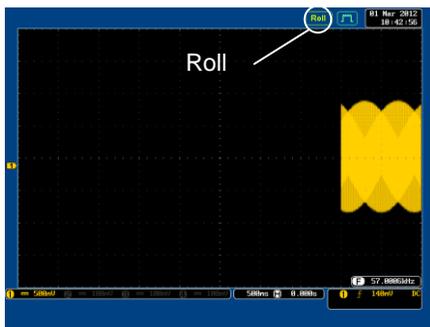

Select Roll Mode Manually	1. Press the Trigger *Menu* key.

2. Press *Mode* from the bottom menu and select *Auto (Untriggered Roll)* from the side menu.

Zoom Waveform Horizontally

Background   When in Zoom mode the screen is split into 2 sections. The top of the display shows the full record length, with the bottom of the screen showing the normal view.

Panel Operation   1. Press the *Zoom* key.

Zoom

2. The Zoom mode screen appears.

Zoom window

Zoom time base   Horizontal position
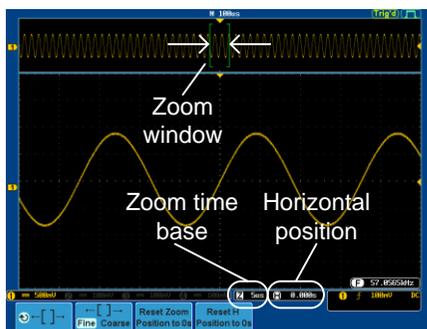

Horizontal Navigation   To scroll the waveform left or right, use the *Horizontal Position* knob.

POSITION

To reset the horizontal position, press *Reset H Position to 0s*.

Reset H Position to 0s

Zoom   To increase the zoom range, use the *TIME/DIV* knob.

TIME/DIV
Down

Up
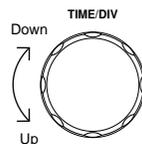

The zoom time base (Z) at the bottom of the screen will change accordingly.

```
Z  50us  H   0.000s
```

Move the Zoom Window	Use the *Variable* knob to pan the zoom window horizontally.	Left ⟋ ⟍ Right VARIABLE
	To reset the Zoom position, press *Reset Zoom Position to 0s*.	Reset Zoom Position to 0s
Scroll Sensitivity	To alter the scrolling sensitivity of the Zoom Window, press the ←[ ]→ key to toggle the scrolling sensitivity.	←[ ]→ Fine Coarse
	Sensitivity Fine, Coarse	
Exit	To go back to the original view, press the *Zoom* key again.	Zoom
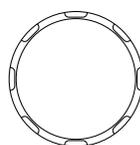

Vertical View (Channel)

This section describes how to set the vertical scale, position, and coupling mode.

Move Waveform Position Vertically

Panel Operation   1. To move the waveform up or down, turn the *vertical position* knob for each channel.

Up   POSITION

Down

2. As the waveform moves, the vertical position of the cursor appears at the bottom half of the display.
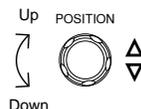

Position = 0.00V

View or Reset Vertical Position   1. Press a channel key. The vertical position is shown in the ↻*Position /* ↧*Set to 0* soft key.

CH1

↻ Position /
↧ Set to 0
0.00V

2. To change the position, press ↻*Position /* ↧*Set to 0* to reset the vertical position or turn the *vertical position* knob to the desired level.

Run/Stop Mode   The waveform can be moved vertically in both Run and Stop mode.

Select Vertical Scale

VOLTS/DIV

Panel Operation   To change the vertical scale, turn the VOLTS/DIV knob; left (down) or right (up).
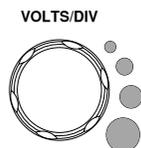

The vertical scale indicator on the bottom left of the display changes accordingly for the specific channel.
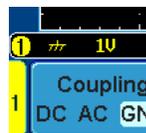

Range	2mV/div ~ 1V/div (50Ω/75Ω), 2mV/div ~ 5V/div (1MΩ). 1-2-5 increments

Stop Mode	In Stop mode, the vertical scale setting can be changed.

Select Coupling Mode

| Panel Operation	1. Press a *channel* key.
	2. Press *Coupling* repeatedly to toggle the coupling mode for the chosen channel.
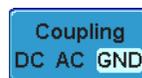

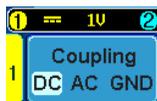

Range	DC coupling mode. The whole portion (AC and DC) of the signal appears on the display.
	AC coupling mode. Only the AC portion of the signal appears on the display. This mode is useful for observing AC waveforms mixed with DC signals. AC coupling is not available with input impedances of 75Ω or 50Ω.
	Ground coupling mode. The display shows only the zero voltage level as a horizontal line.
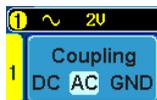

Example   Observing the AC portion of the waveform using AC
                        coupling

DC coupling   AC coupling

Set the Impedance

Panel Operation   1. Press the *Channel* key.

CH1

                   2. Press *Impedance* repeatedly to
                       toggle between the impedance
                       settings.

                       Impedance   1MΩ, 75Ω, 50Ω

Impedance
1MΩ 75Ω 50Ω

Invert Waveform Vertically

Panel Operation   1. Press the *Channel* key.

CH1

                   2. Repeatedly press *Invert* to toggle
                       Invert On or Off.

Invert
On   Off
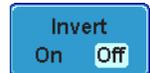

Limit Bandwidth

Background   Bandwidth limitation puts the input signal into a selected bandwidth filter.

                  This function is useful for cutting out high frequency noise to see a clear waveform shape.

                  The bandwidth filters available are dependent on the bandwidth of the oscilloscope model.

Panel Operation   1. Press the *Channel* key.

                     CH1

                  2. Press *Bandwidth* from the bottom menu.

                     Bandwith
                     Full

                  3. Choose a bandwidth* from the side menu (depending on the bandwidth of the oscilloscope).

                     Range   150MHz models: Full, 20MHz

                              250MHz models: Full, 20MHz, 100MHz

                              350MHz models: Full, 20MHz, 100MHz, 200MHz

                              500MHz models: Full, 20MHz, 100MHz, 200MHz, 350MHz

Note   When the input impedance is set to 75Ω, the bandwidth is limited to a maximum of 150MHz.

Example   BW Full   BW Limit 20MHz
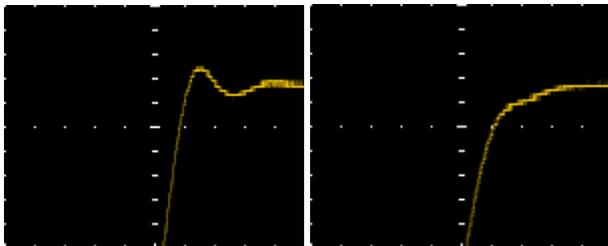

Expand by Ground/Center

Background   When the voltage scale is changed, the Expand
                 function designates whether the signal expands
                 from the center of the signal or from the signal
                 ground level. Expand by center can be used to
                 easily see if a signal has a voltage bias. Expand by
                 ground is the default setting.

Panel Operation 1. Press a *channel* key.

                 CH1

                 2. Press *Expand* repeatedly to toggle
                    between expand *By Ground* and
                    Center.

                    Expand
                    By Ground

                    Range   By Ground, By Center

Example   If the vertical scale is changed when the Expand function is set to ground, the signal will expand from the ground level*. The ground level does not change when the vertical scale is changed.

If the vertical scale is changed when the Expand function is set to center, the signal will expand from the center of the signal. The ground level will suit to match the signal position.

*Or from the upper or lower edge of the screen if the ground level is off screen.

Expand by Ground   Expand by Center
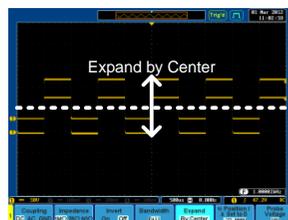

Select Probe Type

Background   A signal probe can be set to voltage or current.

Panel Operation   1. Press the *Channel* key.

2. Press *Probe* from the bottom menu.
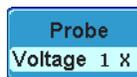

3. Press the *Voltage/Current* softkey to toggle between voltage and current.
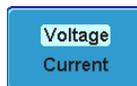

Select Probe Attenuation Level

Background   A signal probe has an attenuation switch to lower
                 the original DUT signal level to the oscilloscope
                 input range, if necessary. The probe attenuation
                 selection adjusts the vertical scale so that the
                 voltage level on the display reflects the real value
                 on a DUT.

Panel Operation 1. Press the *Channel* key.

                 CH1

                 2. Press *Probe* from the bottom menu.

                 Probe
                 Voltage 1 X

                 3. Press *Attenuation* on the side menu
                     and use the variable knob to set the
                     attenuation.

                     Alternatively, press *Set to 10X*.

                 Attenuation
                 ↻ 1 X

                 Set to 10X

                     Range   1mX ~1kX (1-2-5 step)

Note   The attenuation factor adds no influence on the
                 real signal. It just changes the voltage/current
                 scale on the display.

Set the Deskew

Background   The deskew function is used to compensate for the propagation delay between the oscilloscope and the probe.

Panel Operation   1. Press one of the *Channel* keys.

CH1

2. Press *Probe* from the bottom menu.

Probe
Voltage 1 X
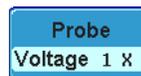

3. Press *Deskew* on the side menu and use the variable knob to set the deskew time.

Deskew
0 s

Set to 0s

Alternatively, press *Set to 0s* to reset the deskew time.

Range   -50ns~50ns, 10ps increments

4. Repeat the procedure for another channel if necessary.

Trigger

The trigger configures the conditions for when the GDS-3000 captures a waveform.

Trigger Type Overview

Edge   The edge trigger is the simplest trigger type. An edge trigger triggers when the signal crosses an amplitude threshold with either a positive or negative slope.

Rising edge trigger

Falling edge trigger
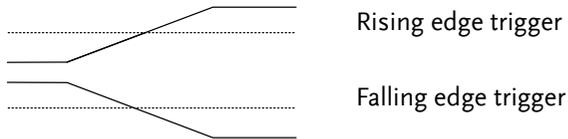

Delay   The Delay trigger works in tandem with the edge trigger, by waiting for a specified time or number of events before the edge trigger starts. This method allows pinpointing a location in a long series of trigger events.

Note: when using the delay trigger, the edge trigger source can be any one of the channel inputs, the EXT input or the AC line.

Delay trigger example (by event)

A   Ext. trigger input (Delay trigger)

B   Source (Edge trigger)

C   Delay event count (3)

D   First triggering point

Delay trigger example (by time)

A	Ext. trigger input
B	Source
C	Delay time length
D	First triggering point
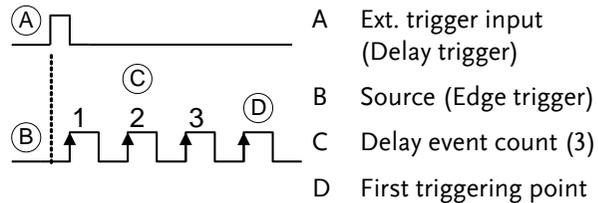

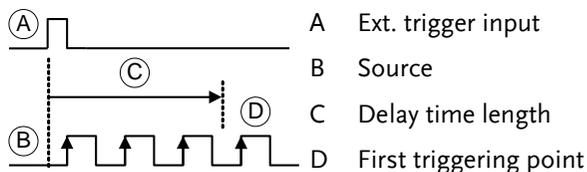

Pulse Width
Triggers when the pulse width of the signal is less than, equal, not equal or greater than a specified pulse width.

Pulse width
Video
Extracts a sync pulse from a video format signal, and triggers on a specific line or field.

Pulse and Runt
Triggers on a "runt". A runt is a pulse that passes a specified threshold but fails to pass a second threshold. Both positive and negative runts can be detected.

A	Pulse
B	Runt
C	High threshold
D	Low threshold
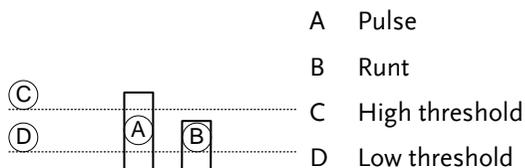

Rise and Fall
Trigger on rising and or falling edges, below or over a specified rate. The threshold can also be specified.

A	Thresholds
B	Rate (time)
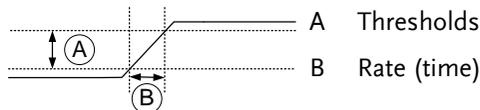

Trigger Parameter Overview

All the following parameters are common for all the trigger types unless stated otherwise.

Trigger Source	CH1 ~ 4	Channel 1 ~ 4 input signals
	EXT	External trigger input signal
	AC Line	AC mains signal
	Alternate	Alternate between channel sources for the trigger source.
	EXT Probe	Probe trigger source. Set the probe as either current or voltage.

EXT TRIG

Trigger Mode	Auto (un-triggered roll)	The GDS-3000 generates an internal trigger if there is no trigger event, to make sure waveforms are constantly updated regardless of trigger events. Select this mode especially when viewing rolling waveforms at slower timebases.
	Normal	The GDS-3000 acquires a waveform only when a trigger event occurs.
	Single	The GDS-3000 acquires a waveform once when a trigger event occurs, then stops acquiring. Press the Single key to acquire a waveform again.

Single

Coupling (Edge, Delay)	DC	DC coupling.
	AC	AC coupling. Blocks DC components from the trigger circuits.
	HF reject	High frequency filter above 50kHz
	LF reject	Low frequency filter below 50kHz
	Reject noise	DC coupling with low sensitivity to reject noise.

Slope (Edge, Delay, Rise & Fall)	⌐⌐	Trigger on a rising edge.
	⌐⌐	Trigger on a falling edge.
	⌐⌐	Don't care.
		(Rise & Fall trigger type only)

Trigger Level (Edge, Delay)	Level	Adjusts the trigger manually using the Trigger LEVEL knob. LEVEL
	Set to TTL 1.4V	Sets the trigger level to 1.4V, suitable for triggering on TTL signals.
	Set to ECL -1.3V	Sets the trigger to -1.3V. This is suitable for ECL circuits.
	Set to 50%	Sets the trigger level to 50% of the waveform amplitude. 50%

Holdoff	Holdoff	Sets the holdoff time.
	Set to Minimum	Set the holdoff time to the minimum.

Delay (Delay)	Time	Sets the delay time (10ns ~ 10s) between the trigger event and the real trigger timing.
	Event	Sets the number of events (1 ~ 65535) passed after the trigger event, until the real trigger timing.
	Set to Minimum	Sets the source trigger to the minimum time.

When (Pulse Width)	Sets the pulse width (4ns ~ 10s) and the triggering condition.		
	>	Longer than	= Equal to
	<	Shorter than	≠ Not equal to

Threshold (Pulse Width)	Sets the amplitude threshold level for the pulse widths.	
	Threshold	–XXV ~ +XXV, user-set level
	Set to TTL	1.4V
	Set to ECL	-1.3V
	Set to 50%	Sets the threshold to 50%

Standard (Video)	NTSC	National Television System Committee
	PAL	Phase Alternate by Line
	SECAM	SEquential Couleur A Memoire
	EDTV	480P (NTSC) (576p PAL)
	HDTV	720P, 1080i, 1080P signals

Polarity (Edge, Video)	⎍	Positive polarity (triggered on the high to low transition)
	⎍	Negative polarity (triggered on the low to high transition)

Trigger On (Video)	Selects the trigger point in the video signal.	
	Field	1 or 2 or all.
	Line	1~263 for NTSC, 1~313 for PAL/SECAM, 1~ 525/625 for EDTV, 1~562/750/1125 for HDTV or all.

Threshold (Pulse Runt)		
	⎍ ⎍	Sets the upper threshold limit.
	⎍ ⎍	Sets the lower threshold limit.
	Set to TTL	1.4V
	Set to ECL	-1.3V

Threshold (Rise & Fall)		
	⁄ High	Sets the High threshold.
	⁄ Low	Sets the Low threshold.
	Set to TTL	1.4V
	Set to ECL	-1.3V

Setup Holdoff Level

Background   The holdoff function defines the waiting period
                    before the GDS-3000 starts triggering again after a
                    trigger point. The holdoff function ensures a stable
                    display if there are a number points in a periodic
                    waveform that can be triggered. Holdoff applies to
                    all the triggering types.

Trigger point
Holdoff time
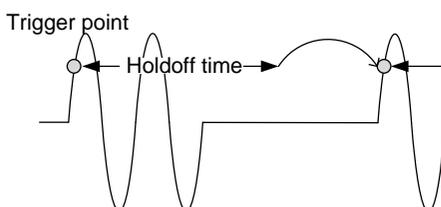

Panel Operation   1. Press the trigger *Menu* key.

                                                                        Menu

                  2. To set the Holdoff time, press the
                      Holdoff (or *Mode/Holdoff*) menu
                      button on the bottom bezel.

                                                                    Holdoff
                                                                    10.0ns

                  3. Use the side menu to set the
                      Holdoff time.

                                                                    ↻   10.0ns

                      Range   10ns~10s

                      Pressing *Set to Minimum* sets the
                      Holdoff time to the minimum,   Set to
                      10ns.   Minimum

                      Note: The holdoff function is automatically
                      disabled when the waveform update mode is
                      in roll mode (page114).

Setup Trigger Mode

Background The trigger mode can be set to Normal or Auto (untriggered roll). The triggering mode applies to all the trigger types. See page 114.

Panel Operation 1. Press the Trigger menu key.

Menu

2. Press *Mode* from the bottom menu to change the triggering mode.

Mode
Auto

3. Use the side panel to select *Auto* or *Normal* triggering modes.

Range   Auto, Normal

Using the Edge Trigger

Panel Operation 1. Press the Trigger menu key.

Menu

2. Press *Type* from the lower bezel menu.

Type
Edge

3. Select *Edge* from the side menu. The edge trigger indicator appears at the bottom of the display.

❶ ⭭ 26.4U   DC

From left: trigger source, slope, trigger level, coupling

4. Press *Source* to change the trigger source.

Source
CH1

5. Use the side menu to select the trigger source type.

> Range   Channel 1 ~ 4 (Alternate On/Off), Line, EXT (Ext Probe: Volt/Current, Attenuation: 1mX~1kX), AC Line

6. Press *Coupling* from the bottom bezel menu to select the trigger coupling or frequency filter settings.

> Coupling
> DC

7. Choose the coupling from the side menu.

> Range   DC, AC

8. Press *Reject* to toggle the rejection filter from the side menu.

> Reject
> Off   HF   LF

> Range   HF Reject, LF Reject, Off

9. Toggle *Noise Rejection* On or Off from the side menu.
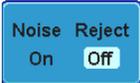

> Noise Reject
> On   Off

> Range   On, Off

10. From the bottom menu press *Slope* to toggle the slope type.

> Slope

> Range   Rising edge, falling edge

11. To set the external trigger level, select *Level* from the bottom bezel menu.

> Level
> 0.00V

12. Set the external trigger level using the side menu.
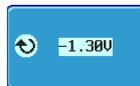

Range	00.0V~ 5 screen divisions
	Set to TTL 1.4V
	Set to ECL -1.3V
	Set to 50%

Using Advanced Delay Trigger

Background   The EXT trigger source is always used as the delay triggering source.

Panel Operation 1. Press the trigger *Menu* key.

2. Press *Type* from the lower bezel menu.

3. Select *Delay* from the side menu. The delay + edge trigger indicator appears at the bottom of the display.

From left: external source, slope, trigger level, delay + external source

4. To set the delay press *Delay* from the bottom bezel.

5. To Delay by Time, press *Time* from the side menu and set the delay time.
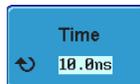

> Time
> ↻ 10.0ns

   Range 10ns ~ 10s (by time)

   Set to minimum

6. To Delay by Event, press *Event* from the side menu and set the number of events.

> Event
> ↻ 1

   Range 1 ~ 65535 events

   Set to Minimum

Using Pulse Width Trigger

Panel Operation 1. Press the trigger *Menu* key.

> Menu

2. Press the *Type* key from the lower bezel menu.

> Type
> Edge

3. Select *Pulse Width* from the side menu. The pulse width trigger indicator appears at the bottom of the display.

> Pulse Width

> **❶ ⊐⌐₣ › 4.00ns   DC**

   From left: external source, polarity, when

4. Press *Source* from the lower bezel.

> Source
> CH1

5. Use the side menu to select the
    pulse width trigger source.

    Range   Channel 1 ~ 4 (Alternate On/Off),
                 Line, EXT (Ext Probe: Volt/Current,
                 Attenuation: 1mX~1kX), AC Line

6. Press *Polarity* to toggle the polarity
    type.
    Range   Positive (high to low transition)
                 Negative (low to high transition)

7. Press *When* from the lower bezel.

8. Then use the side menu to select
    the pulse width condition and
    width.

    Condition   > , < , = , ≠

    Width   4ns ~ 10s

9. Press *Threshold* from the lower
    bezel to edit the pulse width
    threshold.

10. Use the side menu to set the
    threshold.

    Range   -XXV~XXV

                 Set to TTL 1.4V

                 Set to ECL -1.3V

                 Set to 50%

Using Video Trigger

Panel Operation   1. Press the trigger *Menu* key.

> Menu

2. Press the *Type* key from the lower bezel menu.

> Type
> Edge

3. Select *Video* from the side menu. The video trigger indicator appears at the bottom of the display.

> Video

> ① NTSC F1   1   AC

> From left: channel, video standard, field, line

4. Press *Source* from the lower bezel.

> Source
> CH1

5. Use the side menu to select the video trigger source.

> Range   Channel 1 ~ 4

6. Press *Standard* on the bottom bezel.

> Standard
> NTSC

7. Use the side menu to select the video standard.

> Range   NTSC, PAL, SECAM, EDTV (480P/576P), HDTV (720P/1080i/1080P)

8. Press *Trigger On* to edit the video field and line.

> Trigger On
> Field1   1

9. Use the side menu to select the field and line.

   Field   1, 2, All

   Video line   NTSC: 1 ~ 262 (Even), 1 ~ 263 (Odd)
                  PAL/SECAM: 1 ~ 312 (Even),
                  1 ~ 313 (Odd),

                  EDTV(480P): 1~ 525, EDTV(576P):
                  1~ 625

                  HDTV(720P): 1~ 750, HDTV (1080i):
                  1 ~ 562 (even), 1~563 (odd), HDTV
                  (1080P): 1~1125, All

10. Press *Polarity* to toggle the polarity type.

    Range   positive, negative

Pulse Runt trigger

Panel Operation 1. Press the trigger *Menu* key.

2. Press the *Type* key from the lower bezel menu.

3. Select *Others → Pulse Runt* from the side menu. The Pulse and Runt indicator appears at the bottom of the display.
   From left: Polarity, source, high/low threshold, threshold level

4. Press *Source* from the lower menu.
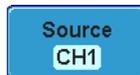

> **Source**
> **CH1**

5. Use the side menu to select a source.

    Range   Channel 1 ~ 4

6. Press *Polarity* to toggle the polarity.

> **Polarity**

    Range   Rising edge, falling edge, either.

7. Press *When* from the lower menu.

> **When**
> ›5.00ns

8. Then use the side menu to select the condition and width.

    Condition   > , < , = , ≠

    Width   4ns ~ 10s

9. Press *Threshold* from the lower bezel to edit the threshold for each input source.

> **Threshold**
> 0.00V
> 0.00V

10. Use the side menu to set the upper threshold.

> ⟳ 0.00V

    Range   -XXV~XXV

                 Set to TTL 1.4V

                 Set to ECL -1.3V

11. Use the side menu to set the lower threshold.

Range   -XXV~XXV

Set to TTL 1.4V

Set to ECL -1.3V

Using Rise and Fall Trigger

Panel Operation   1. Press the trigger *Menu* key.

Menu

2. Press the *Type* key from the lower bezel menu.

Type
Edge

3. Select *Others* → *Rise and Fall* from the side menu. The Rise and Fall indicator appears at the bottom of the display.

Pulse Runt
Rise & Fall

Others
Rise & Fall

1 H 47.2V   DC
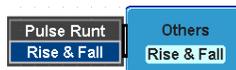

From left: rise and fall, source, high/low threshold, threshold level

4. Press *Source* from the lower menu.

Source
CH1

5. Use the side menu to select a source.

Range   Channel 1 ~ 4

6. Press *Slope* from the bottom menu to toggle the slope.

    Range   Rising edge, falling edge, either

7. Press *When* from the lower menu.

8. Then use the side menu to select the logic conditions and true or false status.

    Condition   > , < , = , ≠

    Width   4ns ~ 10s

9. Press *Threshold* from the lower bezel to edit the threshold for each input source.

10. Use the side menu to set the threshold for the current input.

    Range   High: -XXV~XV

                 Low: -XXV~XXV

                 Set to TTL 1.4V

                 Set to ECT -1.3V

System Info / Language / Clock

This section describes how to set the interface, beeper, language, time/date, and probe compensation signal.

Select Menu Language

Parameter   The following is a list of language available by default. Language selection may differ according to the region to which the GDS-3000 is shipped.

- English   • Chinese (traditional)
- Chinese (simplified)   • Korean
- Japanese   • Polish
- French   • Russian
- German

Panel Operation 1. Press the *Utility* key.

> Utility

2. Select the language from the side menu.
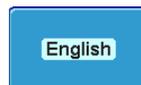

> English

Range*   English, Trad. Chinese, Simp. Chinese, Korean, Japanese, Polish, French, Russian, German.

*Language selection may differ based on region.

View System Information

Panel Operation 1. Press the *Utility* key.

> Utility

2. Press *System* from the lower menu.

    | System |

3. Press *System Info* from the side
   menu. A display panel will appear
   showing:

    | System Info |

   • Manufacturer name • Model name

   • Serial number   • Firmware version

   • Manufacturer URL   • App download
                           location

Erase Memory

Background	The Erase Memory function will erase all internal waveforms, setup files and labels from internal memory.

Erased Items	Waveform 1~20, Setting memory 1~20, Reference 1~4, Labels

Panel Operation	1. Press the *Utility* key.

    | Utility |

2. Press *System* from the lower menu.

System

3. Press *Erase Memory* from the side menu.

Erase Memory

A message will prompt you to press Erase Memory again to confirm the process.

4. Press *Erase Memory*.

Erase Memory

Set the Buzzer Volume

Panel Operation   1. Press the *Utility* key.

Utility

2. Press *System* from the lower menu.

System

3. Press the buzzer icon on the side panel. Use the variable knob to set the volume.

Set Date and Time

Panel Operation/   1. Press the *Utility* key.
Parameter

Utility

2. Press *Date & Time* on the lower
    menu.

    Date &
    Time

3. Set the *Year*, *Month*, *Day*, *Hour* and *Minute* from
    the side menu.

    Year   2000 ~ 2037

    Year
    2009
    Month   1 ~ 12
    Day   1 ~ 31

    Month Day
    Jul   21

    Hour   1~23

    Minute   0~59

    Hour Minute
    15   45

4. Press *Save Now* from the side menu
    to save the date and time.

    Save Now

5. Make sure the date/time setting is
    correctly reflected at the top of the
    display.

SAVE/RECALL

File Format/Utility

Image File Format

Format	DSxxxx.bmp or DSxxxx.png
Contents	The current display image is 800 by 600 pixels. The background color can be inverted (Ink saver function). Each image file is numbered consecutively from DS0001 to DS9999.

Waveform File Format

Format	DSxxx.lsf, CH1~CH4.lsf	
	The LSF file format efficiently stores waveforms. This is the file format that is used for storing and recalling waveforms for measurement with the GDS-3000 series osciloscopes.	
Waveform Type	CH1 ~ 4	Input channel signal
	Math	Math operation result (page 82)
Storage Location	Wave1 ~ Wave20	Waveform files stored to the internal memory. Stored waveforms can be copied to Ref. 1 ~ 4 to be viewed on the display. (W1 ~ W20 waveforms cannot be directly recalled on the display).

	Ref 1~4	Reference waveforms stored in the internal memory, separate from W1 ~ W20. Reference waveforms (Ref 1 ~ 4) can be displayed directly onto the display with amplitude and frequency information. Ref 1~4 are useful for reference purposes. Other waveforms (LSF and W1~20) must be recalled to R1~4 before being displayed.
Contents: Waveform Data		The waveform data can be used for detailed analysis. It consists of the horizontal and vertical data used by the waveform for the entire memory length.

Spreadsheet File Format

Format		DSxxxx.csv (Comma-separated values format, can be opened in spreadsheet applications such as Microsoft Excel). CSV files cannot be recalled onto the GDS-3000 series of oscilloscopes.
Waveform Type	CH1 ~ 4	Input channel signal
	Math	Math operation result (page82)
Contents: Waveform Data		Digital waveform data containing the channel information such as vertical and horizontal position of a signal for the entire memory length.
Contents: Other Data		The following information is also included in the waveform file.

- Firmware version
- Horizontal mode
- Trigger level
- Vertical scale
- Vertical position

- Time of acquisition
- Memory length
- Vertical units
- Probe level
- Horizontal units

- Horizontal scale
- Horizontal position
- Time (of points)

- Horizontal scale
- Sampling period
- Channel

Setup File Format

Format	DSxxxx.set (proprietary format)
	The setup file saves or recalls the following settings.

Contents	Acquire	• Mode	• XY
		• Sample rate	• Sample mode
	Display	• Mode	• Graticule intensity
		• Persistence	• Waveform visuals
		• Waveform intensity	• Graticule
	Channel	• Scale	• Expand
		• Channel	• Position
		• Coupling	• Probe
		• Impedance	• Probe attenuation
		• Invert	• Deskew
		• Bandwidth	
	Cursor	• Horizontal cursor	• Vertical cursor
	Measure	• Source	• Display
		• Gating	
	Horizontal	• Scale	
	Math	• Source1	• Position
		• Operator	• Unit/Div
		• Source2	• Math Off

Trigger	• Type • Source • Coupling • Alternate • Rejection	• Noise Rejection • Slope • Level • Mode • Holdoff
Utility	• Language • Print key	• Ink Saver
Save/recall	• Image file format	• Data file format

Create/Edit file labels

Format   Reference files and Setup files stored in internal
                        memory can have individual labels set. The labels
                        are used on the reference waveform and setup file
                        icons.

Panel Operation   1.   Press the *Save/Recall* key from the
                        front panel.   Save/Recall

                   2.   Press *Edit File Label* from the
                        bottom menu.   Edit
                                                                    File Label

                   3.   Press *Label For* to choose a
                        Reference or Setup file.   Label For
                                                                    Ref1
                                                                    ACK

                        Label For   Ref1~4, Set1~20

                   4.   To choose a preset label, Press *User*   User Preset
                        Preset from the side menu and   ACK
                        choose a label.

                        Labels   ACK, AD0, ANALOG, BIT, CAS,
                                     CLK, CLOCK, CLR, COUNT,
                                     DATA, DTACK, ENABLE, HALT,
                                     INT, IN, IRQ, LATCH, LOAD,
                                     NMI

Edit Label   1.   Press *Edit Character* to edit the
                        current label.   Edit
                                                                   Character
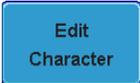

2. The Edit Label window appears.

3. Use the Variable knob to highlight a character.
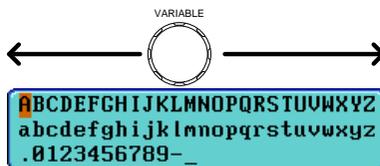

Press *Enter Character* to select a number or letter.
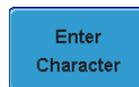

Press *Back Space* to delete a character.
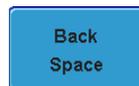

Press *Editing Completed* to create the new label and return to the previous menu.

Cancel	Press *Cancel* to cancel the operation and return to the previous menu.

> Image save to USB:/DS0006.BMP completed!

Note ⚠ The file will not be saved if the power is turned Off or the USB drive is taken out before the message ends.

USB File Utility   To edit the USB flash drive contents (create/ delete/ rename files and folders) or to edit the default file path, press *File Utilities* from the side menu. See page 166 for details.

> File Utilities

Save Image - Print/Save Key

Background   The Print/Save key can be assigned to Print or to Save. When assigned to Save, pressing the Print/Save key will save a screen image to USB.

Panel Operation 1. Connect a USB drive to the front or rear panel USB port. Note: Only one host connection, front or rear, is allowed at a time.

Front   Rear

Host
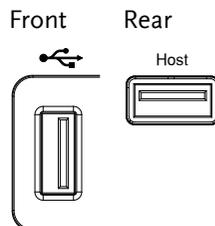

2. Press the *Utility* key.

> Utility

3. Press *Printout* from the bottom menu.

> Printout

4. On the side menu, press *Function* repeatedly to select Save.

The Save led on the screen bezel will be lit when the printout function is set to *Save*.

5. Press the *Print/Save* key to save to USB.

Image save to USB:/DS0006.BMP completed!

Ink Saver   To invert the color for the saved or printed display image, press Ink Saver repeatedly to toggle Ink Saver On or Off from the side menu.

Ink Saver On (Inverted)   Ink Saver Off (Normal)
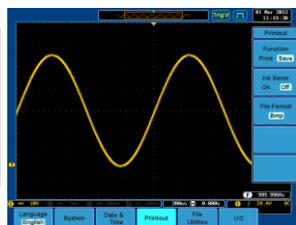

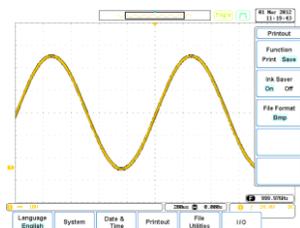

Save Waveform

Panel Operation 1. (For saving to an external   Front   Rear
                     USB flash drive) Connect
                     the drive to the front or rear
                     panel USB port.
                     Note: Only one host
   connection, front or rear, is
                     allowed at a time.
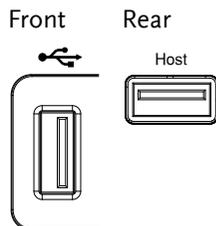

2. Press the *Save/Recall* key from the
    front panel.

3. Press *Save Waveform* from the
    bottom menu.

4. Choose the *From* waveform on the
    side menu.

    Source   CH1~4, Math, Ref1~4, All
                    Displayed

5. Press *To* (internal memory) or *To
    File* and choose a destination to
    save.

    To   Ref1~4, Wave1~4

    To File   DSxxxx.csv, DSxxxx.lsf,
                    CH1~CH4.lsf*

                    *(saved to an ALLxxx directory)

6. Press *Save Now* to confirm saving.
    When completed, a message
    appears at the bottom of the
    display.

`Waveform save to Disk:/DS0001.CSV completed!`

Note ⚠️ The file will not be saved if the power is turned Off or the USB drive is taken out before the message ends.

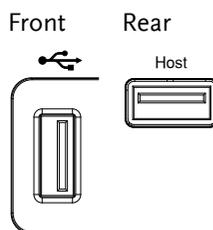

USB File Utility   To edit USB flash drive contents (create/ delete/ rename files and folders), press *File Utilities*. For details, see page 166.

File Utilities

PC Software   Saving waveforms can also be (FreeWave)   accomplished using FreeWave, downloadable from GWInstek website.

FreeWave

Save Setup

Panel Operation   1. (For saving to an external   Front   Rear USB flash drive) Connect the drive to the front or rear panel USB port. Note: Only one host connection, front or rear, is allowed at a time.

Host
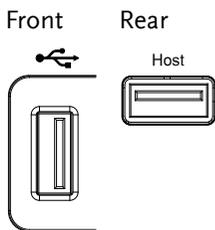

2. Press the *Save/Recall* key from the front panel.

Save/Recall

3. Press *Save Setup* from the bottom menu.

Save Setup

4. Press *To* (internal memory) or *To File* and choose a destination to save.

To	Set1~Set20
To File	DSxxxx.set

5. Press *Save Now* to confirm saving. When completed, a message appears at the bottom of the display.

> Setup save to Disk:/DS0001.SET completed!

Note ⚠   The file will not be saved if the power is turned Off or the USB drive is taken out before the message ends.

USB File Utility   To edit USB flash drive contents (create/ delete/ rename files and folders) or to set the file path, press *File Utilities*. For details, see 166.

Edit Label   To edit labels for Setup files, press *Edit Label*. For more details on editing labels, see page 151.

Configure the Ethernet Interface

Ethernet Configuration	MAC Address	Domain Name
	Instrument Name	DNS IP Address
	User Password	Gateway IP Address
	Instrument IP Address	Subnet Mask
		HTTP Port 80 (fixed)

Background   The Ethernet interface is used for remote control
                    over a network.

Panel Operation   1. Press the *Utility* key.

                                                                    Utility

                    2. Press *I/O* from the bottom menu.

                                                                    I/O

                    3. Press *Ethernet* from the side menu.

                                                                    Ethernet

                    4. Set *DHCP/BOOTP* to *On* or *Off*
                        from the side menu.
                                                                    DHCP/BOOTP
                                                                     On   Off

⚠️Note   IP addresses will automatically be assigned with
                    DHCP/BOOTP set to on. For Static IP Addresses,
                    DHCP/BOOTP should be set to off.
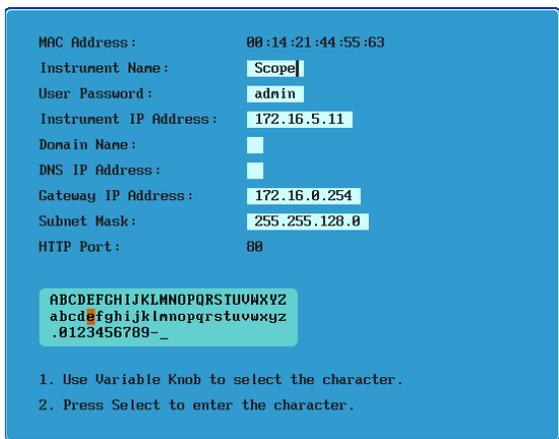

```
MAC Address:              00:14:21:44:55:63
Instrument Name:          Scope
User Password:            admin
Instrument IP Address:    172.16.5.11
Domain Name:              ▪
DNS IP Address:           ▪
Gateway IP Address:       172.16.0.254
Subnet Mask:              255.255.128.0
HTTP Port:                80

 ABCDEFGHIJKLMNOPQRSTUVWXYZ
 abcdefghijklmnopqrstuvwxyz
 .0123456789-_

1. Use Variable Knob to select the character.
2. Press Select to enter the character.
```

5. Use the *Up* and *Down* arrows on the side menu to navigate each Ethernet configuration item.
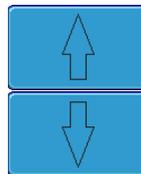

Items   MAC Address, Instrument Name, User Password, Instrument IP Address, Domain Name, DNS IP Address, Gateway IP Address, Subnet Mask

Note: HTTP Port is fixed at 80.

6. Use the Variable knob to highlight a character and use the Select key to choose a character.
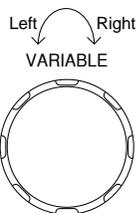

Press *Backspace* to delete a character.

7. Connect the Ethernet cable to the rear panel of the GDS-3000.

Configure GPIB Interface

To use GPIB, the optional GPIB to USB (GUG-001) adapter must be used. The GPIB address can be configured for the GUG-001 from the utility menu. See the GUG-001 user manual for more information.

Configure GPIB
1. Insert the GUG-001 USB cable into the rear panel USB device port.

2. Press the *Utility* key.

3. Press *I/O* from the bottom menu.

4. Press USB Device Port from the side menu.

5. Press *GPIB* from the side menu.

6. Use the variable knob to set the GPIB Address from the side menu.
   Range   1 ~ 30

GPIB Constraints
- Maximum 15 devices altogether, 20m cable length, 2m between each device
- Unique address assigned to each device
- At least 2/3 of the devices turned On
- No loop or parallel connection

USB/RS-232C Remote Control Software

Terminal Application (USB/RS-232C)	Invoke the terminal application such as telnet. For RS-232C, set the COM port, baud rate, stop bit, data bit, and parity accordingly.
	To check the COM port No, see the Device Manager in the PC. For WinXP, Control panel → System → Hardware tab.
Functionality Check	Key in this query command via the terminal.
	*idn?
	This should return the Manufacturer, Model number, Serial number, and Firmware version in the following format.
	GW, GDS-3152, EK0000001, V1.00
	Note: remember to use the appropriate terminal character when entering the command.
PC Software (USB only)	The proprietary PC software FreeWave is downloadable from the GWInstek website for remote control.

Web Server

Web Server Overview

Background	The GDS-3000 has an inbuilt web server that can be used to:

- view the system information (Welcome Page)
- set/view the network configuration settings (Network Configuration)
- remotely view the current display image on the unit (Get Display Image)

System Information:
- Manufacturer
- Serial Number
- Firmware version
- Hostname
- Domain name
- IP Address
- Subset Mask
- DNS
- MAC Adress
- DHCP State

Network Configuration
- Hostname
- Domain name
- IP Address
- Subnet mask
- Gateway
- DNS
- DHCP State

Get Display
Image

• Current display image
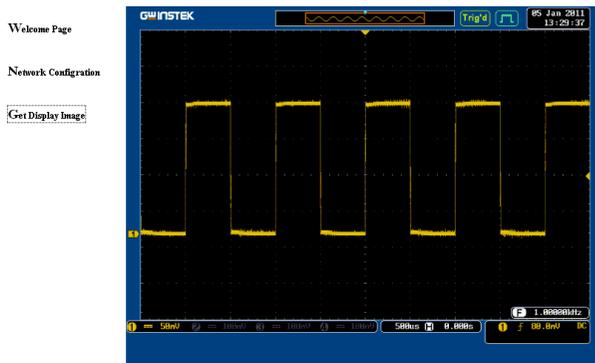

Panel Operation   1. Configure the Ethernet interface.   Page 180

2. Enter the IP address of the GDS-3000 unit into
   the address bar of a web browser.

   For example:

   http://172.16.20.255

3. The GDS-3000 web browser welcome page
   appears.

MAINTENANCE

Three types of maintenance operations are available: signal path compensation, vertical accuracy calibration and probe compensation. Run these operations when using the GDS-3000 in a new environment. The maintenance chapter also includes instruction on how to install and uninstall optional software applications.

How to use SPC function

Background   Signal Path Compensation (SPC) is used to
                  compensate the internal signal path due to
                  ambient temperature. SPC is able to optimize the
                  accuracy of the oscilloscope with respect to the
                  ambient temperature.

Panel Operation   1. Press the *Utility* key.

                  Utility

                  2. Press *System* from the bottom
                      menu.

                  System
                  3. Press *SPC* from the side menu. A
                      message showing a brief
                      introduction to SPC appears on the
                      screen.

                  SPC

⚠Note   Disconnect all probes and cables from all channels
                  before calibrating.

                  4. Press *Start* on the side menu to
                      start SPC calibration.

⚠Note   The DSO needs to be warmed up for at least 30
                  minutes before using the SPC function.

                  5. The SPC Calibration will proceed
                      one channel at a time, from
                      channel 1 to channel 4.

Vertical Accuracy Calibration

Panel Operation   1. Press the *Utility* key.

Utility

2. Press *System* from the bottom menu.

System
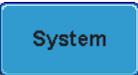

3. Press *more 1 of 2* from the side menu.

more
1 of 2

4. Press *Self Cal* on the side menu.

Self Cal

5. Press *Vertical* on the side menu.

Vertical

6. A message appears to "Set CAL to CH1, then press F1".

7. Connect the calibration signal from the rear panel to the Channel1 input with a BNC cable.
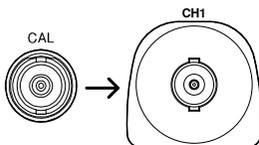

8. Press *Vertical* again after connecting CAL to the channel 1 input.

Vertical

The calibration for Channel1 starts and ends automatically, in less than 5 minutes. A message is displayed when the calibration procedure has ended.

9. Repeat the above step for Channel 2, 3* and 4* when prompted.

    *4 channel models.

10. When the calibration for all channels has completed, the display goes back to the default state.

Probe Compensation

Panel Operation 1. Connect the probe between the Channel1 input and the probe compensation output (2Vp-p, 1kHz square wave) on the front panel. Set the probe attenuation to x10 (GDP probes are fixed at x10).
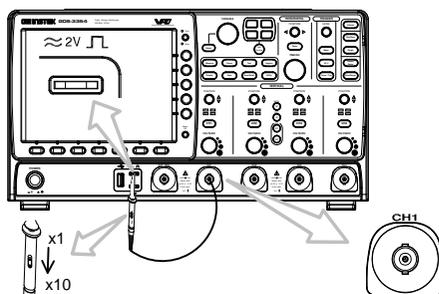

2. Press the *CH1* key to activate CH1.

CH1

3. Set the *Coupling* to DC from the bottom menu.

Coupling
DC AC GND
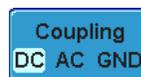

4. Set *Impedance* to 1MΩ from the
    bottom menu.

    Impedance
    1MΩ 75Ω 50Ω

5. Set the Probe attenuation to   Page 123
    Voltage, 10X.

6. Press the *Autoset* key. The
    compensation signal appears on
    the display.

    Autoset

7. Press the *Display* key, then
    set the display type to
    Vector.

    Display →

    Dot Vector

      →
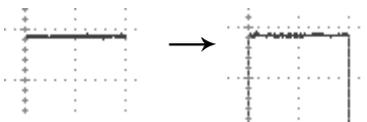

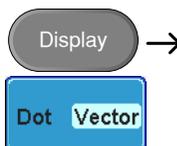

8. Turn the adjustment point on the probe to
    make the waveform as square as possible.

Activating Optional Software

Background   The GDS-3000 has power analysis software (page 95), serial bus decoding software (page 96) and other GW Instek applications as optional extras. GW Instek supplies both free-of-charge and paid-for applications.

Note: An activation key is required to activate each optional software application.

For the latest files and information regarding the optional software packages, see the GW Instek website: www.gwinstek.com

Uninstalling Optional Software

Background   Optional software packages such as the power analysis software or the serial bus decode software can be uninstalled from the system menu.

Panel Operation   1. Press the *Utility* key.

Utility

2. Press *System* from the bottom menu.

System

3. Press more *1 of 2* from the side menu.

more
1 of 2

4. Press *Option Uninstall* on the side menu.

Option
Uninstall

5. Select the optional software packages that you wish to uninstall from the side menu.

F_{AQ}

- I connected the signal but it does not appear on the display.
- I want to remove the (Measurement result / FFT result / Help contents) from the display.
- The waveform does not update (frozen).
- The probe waveform is distorted.
- Autoset does not catch the signal well.
- I can't save files to the internal memory.
- The display image printout is too dark on the background.
- The date and time setting are not correct.
- The accuracy does not match the specification.

I connected the signal but it does not appear on the display.

Make sure you have activated the channel by pressing the Channel key (the channel key lights up).

I want to remove the (Measurement result / FFT result / Help contents) from the display.

To clear automatic measurement results, press the Measure key, Select Remove Measurement and choose Remove All. See page 72.

To clear individual measurements from the screen, press the Measure key, select Display All and choose Display None. See page 74.

To clear FFT result, press the Math key twice. See page82 for details.

To clear Help result, press the Help key again. See page54 for details.

The waveform does not update (frozen).

Press the Run/Stop key to unfreeze the waveform. See page 59 for details.

If this does not help, the trigger mode might be set to Single. Press the Single key to exit Single mode. See page 59 for trigger setting details.

The probe waveform is distorted.

You might need to compensate the probe. The input impedance may also have to be changed to suit your probe. For details, see page 190. Note that the frequency accuracy and duty factor are not specified for the probe compensation waveform and therefore it should not be used for other reference purposes. Also remember to set the impedance to 1MΩ.

Autoset does not catch the signal well.

The Autoset function cannot catch signals under 30mV or 20Hz. Please use the manual operation. See page 58 for Autoset details.

I can't save files to the internal memory.

If a USB stick is inserted into one of the USB slots and you wish to save to the scope internal memory, press the *Utilities* key and set the file path to internal memory. Note however that image files can only be saved to USB when using the Print key.

The display image printout is too dark on the background.

Use the Ink Saver function which reverses the background color. For details, see page 174.

The date and time setting are not correct.

For date and time setting details, please see page 144. If it does not help, the internal battery controlling the clock might be worn out. Contact your dealer or GWInstek.

The accuracy does not match the specification.

Make sure the device is powered On for at least 30 minutes, within +20°C~+30°C. This is necessary to stabilize the unit to match the specification.

For more information, contact your local dealer or GW Instek at www.gwinstek.com/marketing@goodwill.com.tw.

APPENDIX

GDS-3000 Specifications

The specifications apply when the GDS-3000 is powered on for at least 30 minutes under +20°C~+30°C.

Model-specific

GDS-3152	Channels	2 + Ext
	Bandwidth	DC ~ 150MHz (–3dB)
	Rise time	2.3ns
GDS-3154	Channels	4 + Ext
	Bandwidth	DC ~ 150MHz (–3dB)
	Rise time	2.3ns
GDS-3252	Channels	2 + Ext
	Bandwidth	DC ~ 250MHz (–3dB)
	Rise time	1.4ns
GDS-3254	Channels	4 + Ext
	Bandwidth	DC ~ 250MHz (–3dB)
	Rise time	1.4ns
GDS-3352	Channels	2 + Ext
	Bandwidth	DC ~ 350MHz (–3dB)
	Rise time	1ns
GDS-3354	Channels	4 + Ext
	Bandwidth	DC ~ 350MHz (–3dB)
	Rise time	1ns
GDS-3502	Channels	2 + Ext
	Bandwidth	DC ~ 500MHz (–3dB)
	Rise time	700ps
GDS-3504	Channels	4 + Ext
	Bandwidth	DC ~ 500MHz (–3dB)
	Rise time	700ps

The bandwidth of the 75Ω input impedance is limited to 150MHz only.

Common

Vertical	Resolution	8 bit @1MΩ: 2mV~5V/div @50/75Ω: 2mV~1V/div
	Input Coupling	AC, DC, GND
	Input Impedance	1MΩ// 15pF
	DC Gain Accuracy	±(3% X |Readout| + 0.1div + 1mV)
	Polarity	Normal & Invert
	Maximum Input Voltage	@1 MΩ: 300V (DC+AC Peak), CAT I @50/75Ω: 5 VRMS max
	Offset Position Range	2mV/div ~ 100mV/div : ±0.5V 200mV/div ~ 5V/div : ±25V
	Bandwidth Limit	Dependent on the oscilloscope bandwidth (BW. BW=150: Full/20MHz BW=250: Full/20MHz/100MHz BW=350: Full/20MHz/100MHz/200MHz BW=500: Full/20MHz/100MHz/200MHz/350MHz
	Waveform Signal Process	Add, subtract, multiply, and divide waveforms, FFT, FFTrms
		FFT:Spectral magnitude. Set FFT Vertical Scale to Linear RMS or dBV RMS, and FFT Window to Rectangular, Hamming, Hanning, or Blackman-Harris.
Trigger	Sources	CH1, CH2, CH3, CH4, Line, EXT
	Modes	Auto (supports Roll Mode for 100 ms/div and slower), Normal, Single
	Type	Edge, Pulse Width, Video, Pulse Runt, Rise & Fall, Alternate, Event-Delay(1~65535 events), Time-Delay(10nS~10S), I^2C*, SPI*, UART* *optional Runt:Trigger on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again. SPI (optional):Trigger on SS, MOSI, MISO, or MOSI and MISO on SPI buses. I^2C (optional):Trigger on Start, Repeated Start, Stop, Missing ACK, Address (7 or 10 bit), Data, or Address and Data on I^2C buses.

		UART (optional): Trigger on Tx Start Bit, Rx Start Bit, Tx End of Packet, Rx End of Packet, Tx Data, Rx Data, Tx Parity Error, and Rx Parity Error.
	Holdoff range	10nS to 10S
	Coupling	AC, DC, LF rej., Hf rej., Noise rej.
	Sensitivity	GDS-31XX ~ GDS-33XX: DC ~ 50MHz Approx. 1div or 10mV 50MHz ~ 150MHz Approx. 1.5div or 15mV 150MHz ~ 350MHz Approx. 2div or 20mV GDS-350X: DC ~ 50MHz Approx. 1div or 1.0mV 50MHz ~ 150MHz Approx. 1.5div or 15mV 150MHz ~ 350MHz Approx. 2div or 20mV 350MHz ~ 500MHz Approx. 2.5div or 25mV
External Trigger	Range	±15V
	Sensitivity	GDS-31XX ~ GDS-33XX: DC ~ 150MHz Approx. 100mV 150MHz ~ 250MHz Approx. 150mV 250MHz ~ 350MHz Approx. 150mV 350MHz ~ 500MHz Approx. 200mV
	Input Impedance	1MΩ±3%, ~16pF
Horizontal	Range	GDS-31XX, GDS-32XX, GDS-33XX: 1ns/div ~ 100s/div (1-2-5 increments); ROLL : 100ms/div ~ 100s/div GDS-350X: 1ns/div ~ 100s/div (1-2.5-5 increments); ROLL : 100ms/div ~ 100s/div
	Pre-trigger	10 div maximum
	Post-trigger	1000 div maximum. The number of divisions depends on the time division.
	Accuracy	±20 ppm over any ≧1 ms time interval
X-Y Mode	X-Axis Input	Channel 1; Channel 3
	Y-Axis Input	Channel 2; Channel 4
	Phase Shift	±3° at 100kHz
Signal Acquisition	Real Time Sample Rate	150/250/300MHz models: 5GSa/s (MAX) 150/250MHz models with 2CH: 2.5GSa/s 500MHz models: 4GSa/s (MAX), 2GSa/s per channel
	ET Sample Rate	100GSa/s maximum for all models
	Record Length	25k points / channel

	Acquisition Mode	Normal, Average, Peak Detect, High Resolution, Single
	Peak Detection	2nS (MAX)
		Normal: Acquire sampled values. Average: From 2 to 256 waveforms included in average. Peak Detect: Captures glitches as narrow as 2 ns at all sweep speeds Hi Res: Real-time boxcar averaging reduces random noise and increases vertical resolution
Cursors and Measurement	Cursors	Amplitude, Time, Gating available
	Automatic Measurement	28 sets: Vpp, Vamp, Vavg, Vrms, Vhi, Vlo, Vmax, Vmin, Rise Preshoot/Overshoot, Fall Preshoot/Overshoot, Freq, Period, Rise Time, Fall Time, Positive Width, Negative Width, Duty Cycle, and nine different delay measurements (FRR, FRF, FFR, FFF, LRR, LRF, LFR, LFF, Phase)
	Cursors measurement	Voltage difference between cursors (ΔV) Time difference between cursors (ΔT)
	Auto counter	6 digits, range from 2Hz minimum to the rated bandwidth
Power Measurements (Option)	Power Quality Measurements	V RMS, I RMS, True Power, Apparent Power, Reactive Power, Frequency, Power Factor, Phase Angle, V Crest Factor, I Crest Factor, (+)V Peak, (-)V Peak, (+)I Peak, (-)I Peak, DC Voltage, DC Current, Impedance, Resistance, Reactance
	Harmonics	Frequency (Hz), Magnitude (%), Mag. RMS (A), Phase (˚), Limit (A), Limit (%), Pass | Fail, Max all , Windows (A), 200% Limit, POHC Limit, THD-F, THD-R, RMS, Overall, POHC, POHL, Input Power, Power Factor, Fundamental Current, Harmonic 3, Harmonic 5
	Ripple Measurements	Ripple, Noise
	In-rush current	First peak, Second peak
Control Panel Function	Autoset	Single-button, automatic setup of all channels for vertical, horizontal and trigger systems, with undo autoset
	Auto-Range	allow you to quickly move from test point to test point without having to reset the oscilloscope for each test point
	Save Setup	20 sets
	Save Waveform	24 sets
Display	TFT LCD Type	8" TFT LCD SVGA color display

	Display Resolution	800 horizontal × 600 vertical pixels (SVGA)
	Interpolation	Sin(x)/x & Equivalent Time Sampling
	Waveform Display	Dots, vectors, variable persistence, infinite persistence
	Display Graticule	8 x 10 divisions
Interface	RS232C	DB-9 male connector
	USB Port	2 sets USB 2.0 High-speed host port 1 set USB High-speed 2.0 device port
	Ethernet Port	RJ-45 connector, 10/100Mbps
	SVGA Video Port	DB-15 female connector, monitor output for display on SVGA monitors
	GPIB	GPIB to USB adapter (Option)
	Go-NoGo BNC	5V Max, 10mA CMOS open collector output
	Internal flash disk	64MB
	Kensington Style Lock	Rear-panel security slot connects to standard Kensington-style lock.
	Line output	3.5mm stereo jack for Go/NoGo audio alarm
Power Source	Line Voltage Range	AC 100V ~ 240V , 48Hz ~ 63Hz , Auto selection
	Power Consumption	96VA
Miscellaneous	Multi-language menu	Available
	On-line help	Available
	Time clock	Time and Date ,Provide the Date/Time for saved data
Dimensions	400W X 200H X 130D, Approx. 4kg	

Probe Specifications

Model-specific Probe Specifications

GTP-151R	Applicable to	GDS-3152 / GDS-3154
	Bandwidth	DC ~ 150MHz
	Rise time	2.3ns
	Input Capacitance	~12pF
	Compensation Range	10 ~ 30pF
GTP-251R	Applicable to	GDS-3252 / GDS-3254
	Bandwidth	DC ~ 250MHz
	Rise time	1.4ns
	Input Capacitance	~12pF
	Compensation Range	10 ~ 30pF
GTP-351R	Applicable to	GDS-3352 / GDS-3354
	Bandwidth	DC ~ 350MHz
	Rise time	1.0ns
	Input Capacitance	~12pF
	Compensation Range	10 ~ 30pF
GTP-501R	Applicable to	GDS-3502 / GDS-3504
	Bandwidth	DC ~ 500MHz
	Rise time	0.7ns
	Input Capacitance	~11.5pF @ 100MHz
	Compensation Range	8 ~ 20pF

Common Probe Specifications

Position x 10	Attenuation Ratio	10:1 (fixed) with readout pin
	Input Resistance	10MΩ when used with 1MΩ input oscilloscope
	Maximum Input Voltage	500V CAT I, 300V CAT II (DC+Peak AC) derating with frequency
Operating Condition	Temperature	–0°C ~ 50°C
	Relative Humidity	≤85% @35°C
Safety Standard	EN61010-031 CAT II
