### 4225-PMU and 4220-PGU SMU and BNC Interconnect Kit

## Overview

The 4200-PMU-PROBER-KIT is a collection of standard and custom connectors and accessories used to connect the 4225-PMU/4220-PGU to a common variety of prober stations. It also allows each channel of the 4225-PMU to connect to the 4200-SMU/4210-SMU with a single cable. This enables both 4225-PMU and 4200-SMU/4210-SMU tests to be run without a switch matrix or re-cabling. This kit is compatible with the 4210-MMPC multi-measurement performance cable kits.

Figure 1: Model 4200-PMU-PROBER-KIT accessories

**NOTE:** Each kit contains all cables and accessories for one dual-channel 4225-PMU or 4220-PGU card. One 4225-PMU/4220-PGU card requires one 4200-PMU-PROBER-KIT. Four 4225-PMU/4220-PGU cards require four 4200-PMU-PROBER-KITs.
